SkillNavora

Product Management Launchpad

Week 6 : Analytics & Metrics

Agenda

SkillNavora

Part 1 – How product managers define success of product ?

- What are Metrics
- Mental model for Product Metrics
- Ladder of Metrics

You can't manage what you don't measure.
Peter F. Drucker
quotefancy

SkillNavora

Why Metrics Matter for Product Managers

Metrics turn product work into clear decisions.

1. **Track**
   See what is happening
2. **Diagnose**
   Understand why it happened
3. **Decide**
   Choose what to improve
4. **Align**
   Show progress to the team

Without metrics
Opinions dominate

With metrics
Patterns become visible

Good PM habit
Measure before you change

From User Value to Business Value

SkillNavora

Good product metrics connect what users are trying to achieve with what the business is trying to grow.

1 User job
Get set up and go live faster

2 User value metric
Time to first completed workflow

3 Business value metric
Activation rate, expansion potential, lower churn risk

Example:
B2B onboarding platform

Faster setup → Time-to-value → Renewal confidence

What are Metrics

- **Metrics**
  - A quantifiable measure used to assess success (or failure) against a goal
  - The set of important metrics that provide insights are KPIs (Key Performance Indicators)
- **Anatomy of a Metric**
  - **Definition**: What is it trying to measure. For example, count of users, depth of engagement, degree of retention, etc.
  - **Value**: Its numerical value.
  - **Time grain**: The period over which the measurement is being made. For example, Monthly or Weekly Active Users, Week 4 vs Week on Week Retention, etc.
  - **Cohort**: The slice or cohort for which the measurement is being made. For example, New users vs Existing users, etc.

SkillNavora

What are Metrics – Example

- **Goal**
  - To lead a successful life
- **Metrics**
  - Measure of Financial health – Net worth
  - Measure of Physical health – Set of biomarkers (like HbA1c, Lipid panel, etc.)
  - Measure of Mental health – Cortisol level
  - Measure of Social health – # of meaningful relationships
- Defining success metrics is hard when the goal is ambiguous!
- You often need many metrics to capture success!

Mental Model for Product Metrics

SkillNavora

The goal of all products is to solve customer problems and generate value for the business

Mental Model for Product Metrics

SkillNavora

- **Identify all users / stakeholders**
  - A product may have more than one type of user /stakeholder
- **Identify their Jobs To Be Done**
  - The higher order problem that the users want to have solved
- **Devise a success metric(s) that captures the completion of the JTBD**
  - One or more metrics that capture true success for the user

- **Identify the business goal**
  - The final goal for a business (for profit) is to generate shareholder wealth
  - Companies also have a vision / mission which act as excellent goal statements
- **Devise a success metric(s) that captures support towards the business goal**
  - For example, how does the product support the business model of the company
  - Guardrail metrics or counter metrics help guard against inadvertent effects

Exercise – Instagram Reels

- **Identify all users / stakeholders and their JTBD**
  - Content creators / Influencers: Build a fan following or a captive audience
  - Content consumers: Find inspiring / relatable / funny content
  - Advertisers / Brands: Influence targeted users to buy products / services
- **Devise a success metric(s) that captures the completion of the JTBD**
  - Content creators / Influencers: Total User Reach or Total # of Followers or Total # of creates
  - Content consumers: Total watch time or Total # of like, comment, share
  - Advertisers / Brands: Total # of ad impressions / clicks / purchases
- **Devise a success metric(s) that captures support towards the business goal**
  - Revenue, # of new users added to IG, Drop in overall use of IG (guardrail)

Goodhart's Law & Metric Gaming

SkillNavora

Why single-metric optimization inevitably corrupts product outcomes

> **“When a measure becomes a target, it ceases to be a good measure.”**
>
> — Marilyn Strathern (formalizing Charles Goodhart's economic principle for complex systems)

1. The Gaming Mechanism

Proxy Displacement

Teams confuse the proxy metric (e.g. clicks or raw DAU) with true customer value (e.g. core workflow completion).

Path of Least Resistance

Under sprint or OKR target pressure, teams optimize the easiest way to move the number, not the hardest way to build real value.

Compounding Side-Effects

Unmonitored dimensions degrade silently until user trust, retention, or unit economics collapse entirely.

2. Real-World PM Traps

The Notification Trap

Boosting DAU by sending 5x promotional push alerts. Short-term DAU rises 8%; app uninstalls and muted alerts surge 40%.

The Signup Friction Trap

Pre-checking newsletter boxes to lift registration conversion. Yields low-intent churners and spam complaints.

The Feature Tour Trap

Forcing 5 unskippable modal walkthroughs to claim 100% feature adoption. Users click "Next" blindly without learning.

3. The Senior PM Defense

Paired Counter-Metrics

Never evaluate an output metric in isolation; always pair volume with quality, retention, and friction guardrails.

Holdout Groups & Audits

Maintain permanent 5% holdout cohorts to verify true incrementality versus cannibalization of existing behavior.

Qualitative Triangulation

Pair metric dashboards with weekly customer interviews and support tickets to detect metric distortion early.

SkillNavora

Ladder of Metrics (Categories or Type of Metrics)

What can you control vs what you get

Input Metrics

Input metrics measure the controllables you can directly influence (relatively speaking)

Things you can control
(Example: Number of user invites sent)

Output Metrics

Output metrics measure the outcomes of the input metrics. Input metrics have a causal effect on Output metrics

Results you get
(Example: Total Signup via user invitation)

If inputs improve, outputs usually follow

SkillNavora

Ladder of Metrics (Categories or Type of Metrics)

Predicting vs Reporting

Leading Metrics

Leading metrics are predictive and signal future success.

Early signals (future)
(Example: Daily Active Users)

Lagging Metrics

Lagging metrics confirm what has already happened but are difficult to directly influence.

Final results (past)
(Example: Revenue)

Leading tells you where you are going, lagging tells you where you reached

SkillNavora

Ladder of Metrics (Categories or Type of Metrics)

The One Metric That Matters

North Star Metric (NSM)

Single metric / One Metric that Matters (OMTM) to signify success

Example: # of successful orders delivered for Swiggy

SkillNavora

Understanding the Ladder of Metrics

Example

airbnb

North Star Metric (What is the one action that creates value)

Number of bookings (& successful stays)

Build the metric ladder

Input (What we control)

Number of high-quality listings added

Output (What we get)

Number of bookings made

Leading (Early signals, predicts the future)

of views on listings

Lagging (Confirms the Past)

Revenue (commission per booking)

The 2×2 Metric Architecture: Controllability vs. Temporality

SkillNavora

Untangling Input vs. Output from Leading vs. Lagging metrics

LEADING INPUTS (High Control, Predictive)

THE DAILY LEVERS PRODUCT & GROWTH TEAMS CONTROL

Slack: # of team member invites sent during initial onboarding
SaaS CRM: # of active CRM integrations connected within Day 0
E-Commerce: Search autocomplete latency and query zero-result rate
Fintech: % of KYC documents auto-verified on first submission

High operational agency + direct causal link to downstream success.

LEADING OUTPUTS (Low Control, Predictive)

EARLY CUSTOMER BEHAVIORS SIGNALING LONG-TERM VALUE

Slack: Team reaching 2,000 sent messages (The "Magic Moment")
Spotify: User saving 10+ songs & following 3 artists in Week 1
Dropbox: User uploading at least 1 file on 2 separate devices
Duolingo: Day-7 streak completion rate among new cohort

Earliest reliable proof that customer unlocked true product value.

LAGGING INPUTS (High Control, Retrospective)

HISTORICAL ACTIONS COMPLETED BY THE ORGANIZATION

Engineering: Story points shipped, PRs merged, or sprint velocity in Q3
Growth: Total paid marketing budget deployed across ad channels
Sales: Total enterprise demo meetings conducted by sales team
Content: Number of help center articles published this quarter

Measures organizational effort spent, NOT resulting customer value.

LAGGING OUTPUTS (Low Control, Retrospective)

THE ULTIMATE BUSINESS & FINANCIAL OUTCOMES

Financial: Annual Recurring Revenue (ARR) & Net Dollar Retention (NDR)
Retention: Annual Logo Churn Rate & Customer Lifetime Value (LTV)
Efficiency: LTV : CAC ratio and gross contribution profit margin
Market: Quarterly EBITDA & consolidated shareholder equity growth

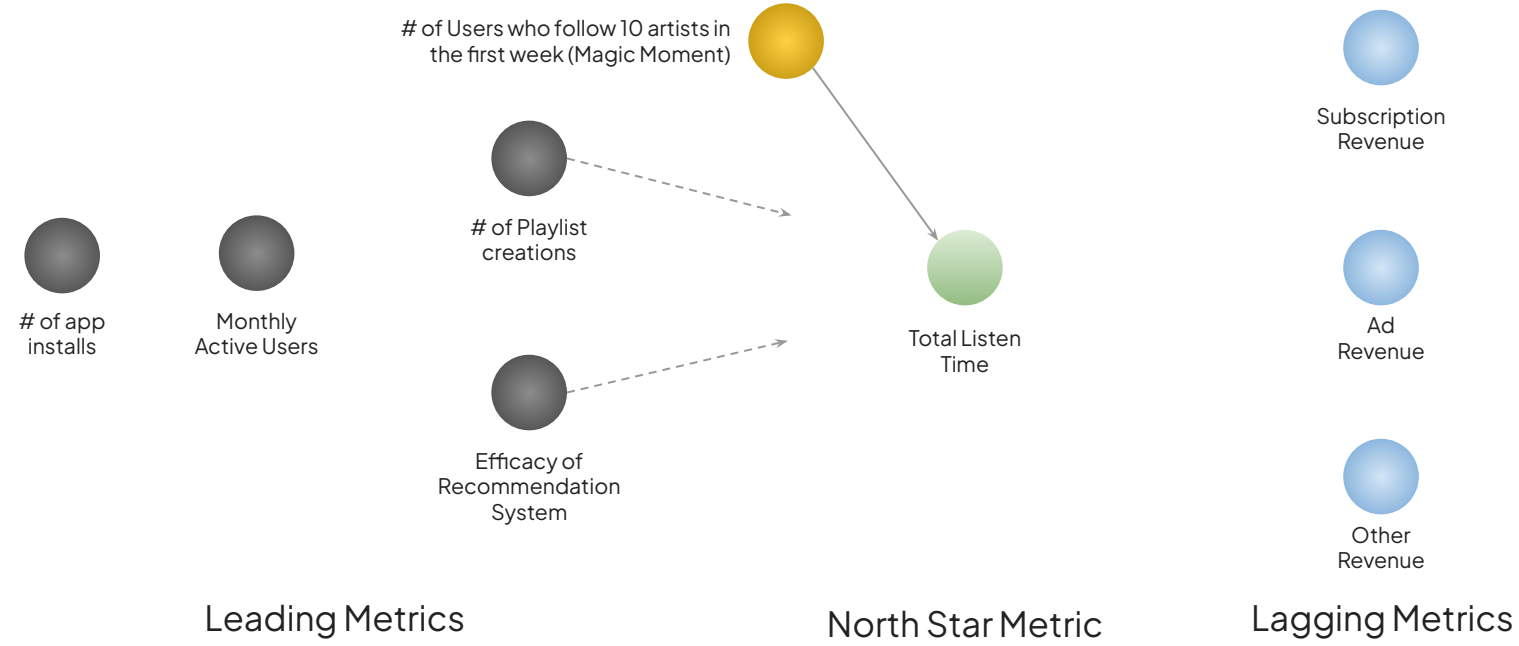

Unforgiving scoreboard of past execution. Cannot be directly operated on.

SkillNavora

Understanding the Ladder of Metrics

Example

Spotify

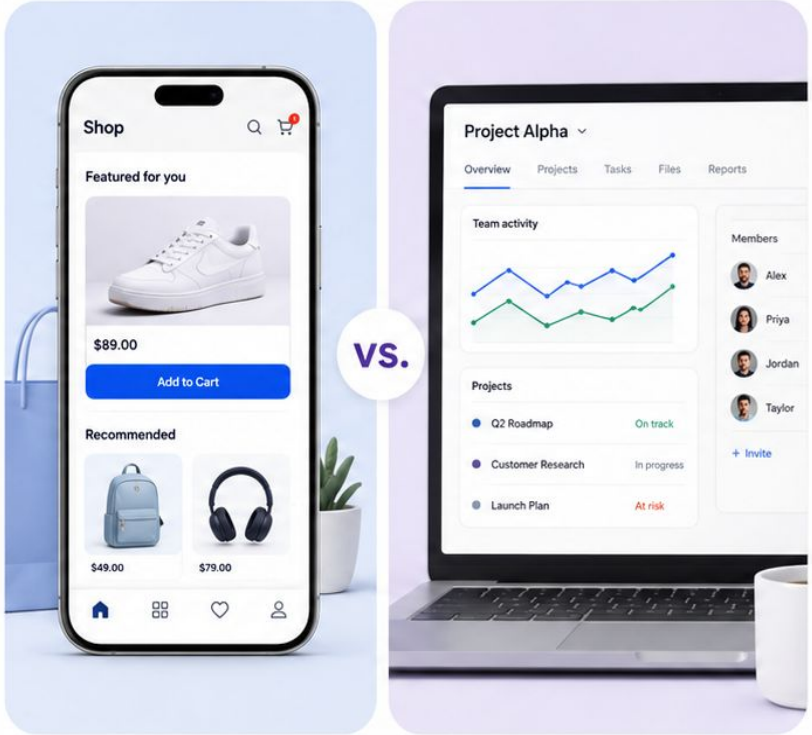

SkillNavora

Why B2B Metrics Differ from B2C

The product may look similar, but the metric logic is often different.

B2C

- User-level behavior
- Shorter decision cycle
- Focus on conversion and retention
- Example metrics: DAU, checkout conversion, repeat rate

B2B

- Account or team-level behavior
- Multi-stakeholder adoption
- Longer sales and renewal cycle
- Example metrics: activation by account, seat adoption, churn risk, expansion revenue

SkillNavora

Build a Metric System, Not One Metric

A single metric rarely tells the full story. PMs need a complete system.

		Example: B2B Collaboration Product
North Star	What long-term value are we creating?	Weekly active teams
Input metrics	What behaviors drive the result?	Invites sent, workflows created
Output metrics	What moved after launch?	Activation rate, workflow completion
Guardrails	What should not get worse?	Error rate, latency
Diagnostic metrics	Where exactly is the problem?	Drop-off after invite step

The Counter-Metric & Guardrail Architecture

SkillNavora

Systemic protection: every primary KPI must be balanced with a non-negotiable guardrail

FOCUS AREA	PRIMARY METRIC (WHAT WE PUSH)	GAMING RISK (WHAT CAN BREAK)	COUNTER GUARDRAIL (WHAT WE DEFEND)
User Acquisition	New Signups & App Installs Blended & Paid CAC	Acquiring low-intent click-farm traffic, bot signups, or deceptive ad-click conversions.	**Day-30 Retention Rate (>=25%)** **Chargeback & Fraud rate (<0.1%)**
Engagement & Growth	Daily Active Users (DAU) Push Alert Open Rate & CTR	Over-notifying users to create synthetic DAU and spikes; driving annoyance, muting, churn.	**App Uninstalls per 1K Sessions (<1.5%)** **Notification Mute / Opt-out Rate**
Monetization & Pricing	Average Revenue Per User (ARPU) Paywall Conversion & Upsell Rate	Dark patterns in checkout, hidden auto-renewals, aggressive paywalls damaging user trust.	**Customer Support Ticket Ratio (<2%)** **30-Day Refund & Dispute Volume**
Platform Reliability	Feature Release Velocity Experiment Concurrency	Shipping unvalidated code, bloated dependencies, and degraded backend latency.	**P99 E2E Latency (<400ms)** **Crash-Free User Sessions (>=99.95%)**

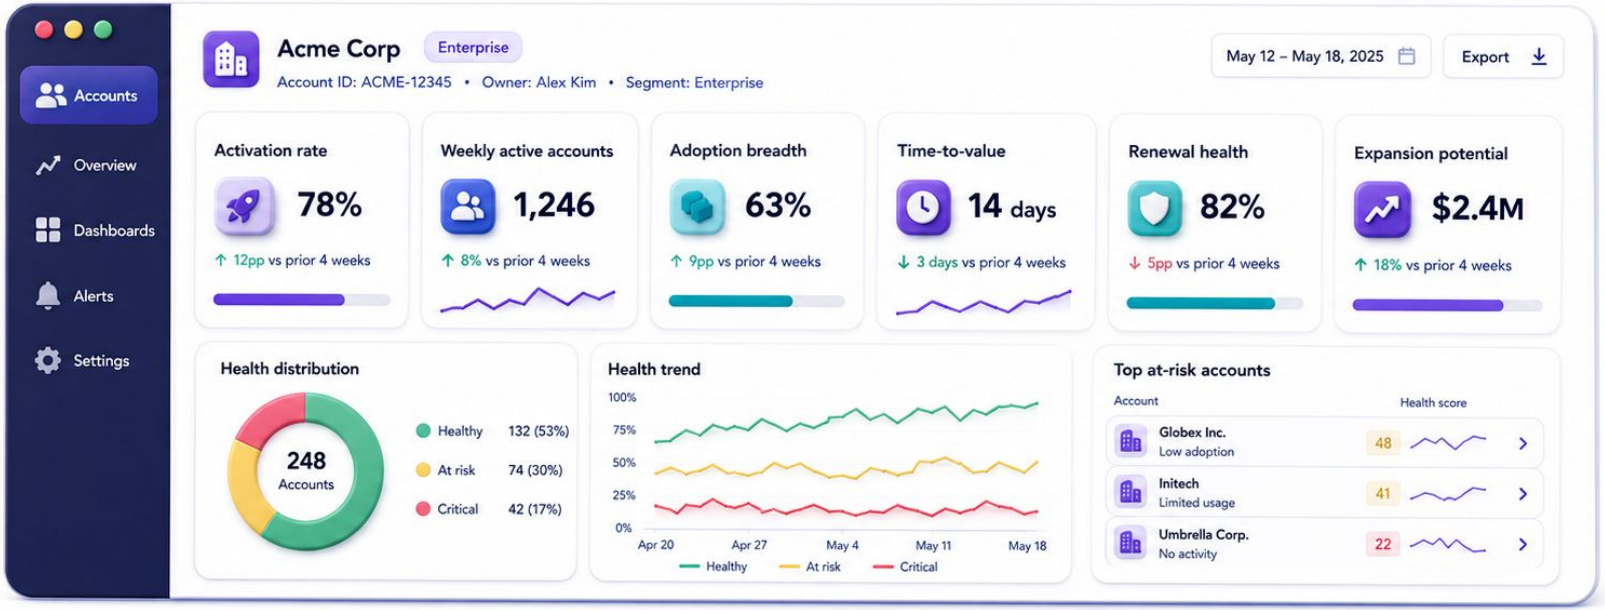

SENIOR PM RULE: NEVER SHIP AN EXPERIMENT WITHOUT ITS PAIRED GUARDRAIL

If primary conversion jumps 5% but your guardrail trips (e.g. churn or support tickets surge), the experiment is an automatic rollback.

Anatomy of a B2B Health Dashboard

SkillNavora

A B2B PM needs a dashboard that shows value, risk, and growth at the account level.

Value

Are accounts getting live and using the product?

Risk

Which accounts are slipping, blocked, or disengaging?

Growth

Which accounts are ready to expand?

SkillNavora

Funnel Analysis for B2B Activation

A funnel helps PMs see where accounts drop before they become active.

What funnel analysis answers

Where users drop
Quantifies conversion at each step to surface the biggest leaks.

Which step blocks value
Reveals friction points that stop accounts from realizing value.

What to test next
Prioritizes the highest-impact experiments to improve activation.

Activity Time

Part 1: Define the below things for Google Maps

- ➔ Identify all users / stakeholders and their JTBD
- ➔ Devise a success metric(s) that captures the completion of the JTBD
- ➔ Devise a success metric(s) that captures support towards the business goal

Part 2: Create the ladder of metrics

- ➔ Make sure you call out some leading metrics, some lagging metrics, and the input / output relationship between some metrics

Activity Solution – Google Maps Metrics Architecture

SkillNavora

Deconstructing JTBD, North Star, Metric Ladder, and Guardrails across Stakeholders

1. Drivers & Commuters

CORE JOB TO BE DONE (JTBD)
Find the fastest, safest, congestion-free route to destination with reliable arrival ETA.

NORTH STAR METRIC
% of trips taken on optimal routes (time, road condition, tolls, live traffic).

LEADING VS. LAGGING
Leading: # of active navigation sessions started
Lagging: Weekly active drivers (WAU), 90-day app retention

INPUT OUTPUT LINK
Input: Reroute latency (<2s), hazard reporting speed
Output: % completed optimal trips High trip NPS

COUNTER GUARDRAILS
Trip abandonment rate (<2%), ETA error variance (<3 min), distracted driving alerts

2. Local Businesses

CORE JOB TO BE DONE (JTBD)
Drive organic discoverability and convert nearby foot traffic into verified paying customers.

NORTH STAR METRIC
Place Sheet Actions (Calls, direction clicks, table reservations, menu views).

LEADING VS. LAGGING
Leading: # of claimed business profiles, updated menus
Lagging: Merchant ad spend, merchant quarterly retention

INPUT OUTPUT LINK
Input: Profile completeness score, review response rate
Output: Place sheet views In-store physical visits

COUNTER GUARDRAILS
Fake/duplicate listing rate (<0.1%), spam review volume, merchant dispute resolution latency

3. Google Platform

CORE JOB TO BE DONE (JTBD)
Build the world's most trusted spatial map and monetize high-intent commercial intent sustainably.

NORTH STAR METRIC
Net High-Intent Monetization (Local Search Ads + Google Maps Platform APIs).

LEADING VS. LAGGING
Leading: Sponsored pin impressions, API query volume
Lagging: Consolidated Ads & Enterprise recurring revenue

INPUT OUTPUT LINK
Input: Sponsored pin context relevance score
Output: Ad click-through-rate (CTR) & Enterprise renewals

COUNTER GUARDRAILS
Map Clutter Index, navigation task completion drops, battery drain, user privacy opt-outs

Agenda

SkillNavora

Part 1 – How product managers define success of product?

- What are Metrics
- Mental Model for Product Metrics
- Ladder of Metrics

Part 2 – How product managers track metrics day to day?

- Useful Metrics Frameworks
- Analyzing Metrics

SkillNavora

Metric Frameworks – AARRR

- Acquisition – Are users showing interest in our product?
- Activation – Are users using our product?
- Retention – Are users using our product repeatedly?
- Referral – Are users bringing in more users to our product?
- Revenue – Are our users generating revenue for us by using the product?

SkillNavora

AARRR – Acquisition

- **Acquisition happens when a customer has been acquired**
  - Common acquisition channels include ads, SEO, content marketing, sales, affiliate marketing, community building, user referrals etc.
  - Customer acquisition goes through the AIDA (Awareness, Interest, Desire, Action) funnel
- **High acquisition (at least in the short term) does not require you to have achieved PMF**
  - A product with high acquisition but poor retention resembles a leaky bucket
  - A steady growth in acquisition is needed to sustain a product since there will always be some users who leave
- **Sample metrics**
  - App downloads, Site visits, Social Media Impressions

AARRR – Activation

- **Activation happens when a customer has used the product and started deriving value**
  - An activated user is said to have gone through a “magic” moment
  - If acquisition is un-targeted and broad, most users fail to get activated
- **Products actively try to get their users to go through the magic moment**
  - For example, Twitter realized that once you followed 30 people you were more likely to come back so they suggest popular accounts when you sign up
  - Dropbox saw that users who uploaded at least one file were much more likely to use Dropbox again and so they encourage you to upload a file during signup.
- **Sample metrics**
  - Active Users

SkillNavora

AARRR – Retention

- **Retention occurs when a customer is using the product repeatedly**
  - This requires the customer to perform the key value deriving activity repeatedly over a period of time
- **Long term user retention is a good indicator of PMF**
  - Products that inculcate “loyalty” or “habits” among users generally have the highest retention
  - Growing slowly gives you a better shot at retaining existing users
  - Users that have churned can be reactivated
- **Sample metrics**
  - Daily/Weekly/Monthly retention, Churn rate

SkillNavora

AARRR – Referral

- **Referral occurs when a customer recommends the product to other users**
  - Customers can refer the product to others through word of mouth
  - Products that have an organic referral chain have low customer acquisition costs
- **Products can encourage referral by building growth or viral loops in the product**
  - For example, discounts for referring friends, Products that sync with contact lists and send connection invites, Products creating shareable content that can be posted on social media
- **Sample metrics**
  - Net Promoter Score (NPS), Viral coefficient, Customer Acquisition Costs (CAC)

Book: Hooked: How to Build Habit-Forming Products - Nir Eyal

SkillNavora

AARRR – Revenue

- **Revenue occurs when a customer starts generating money for the product**
  - A product that has high number of retained and revenue providing users has achieved product market and business model fit
- **Products need the right business model to generate sufficient revenue**
  - The customer LTV should be >> CAC for a sustainable business
- **Sample metrics**
  - Sales, Lifetime Value (LTV)

SkillNavora

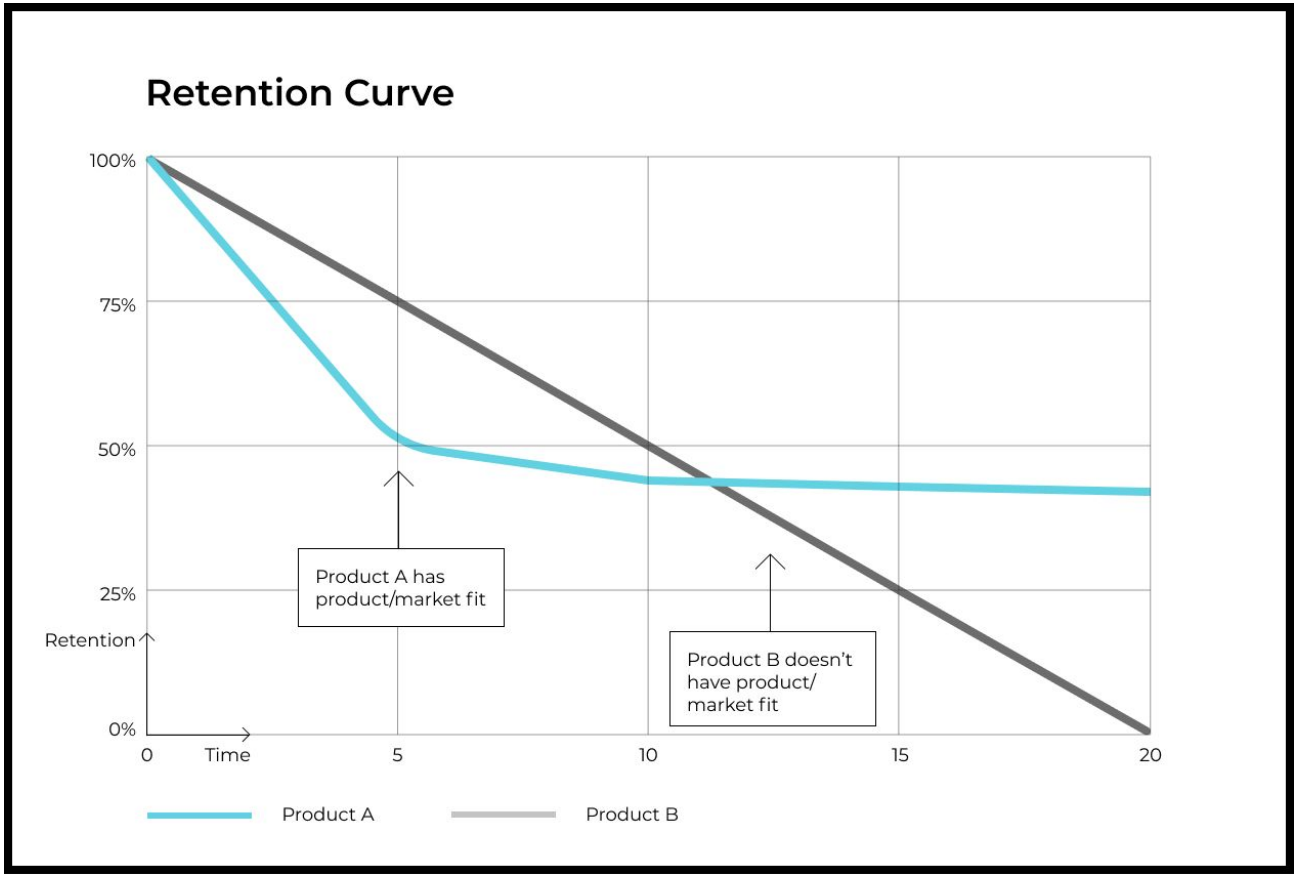

AARRR – Example

AARRR metrics for Cred (credit card payment)

- Acquisition - # of app installs
- Activation - # of users who pay their first credit card bill or # of users who set up their credit cards on Cred
- Retention - # of users who pay n consecutive credit card bills
- Referral - # of users who have shared their Cred rewards on social media or # of users who successfully signed up using a referral code/link
- Revenue - # of users who buy products/services using Cred rewards

Understanding product market fit

SkillNavora

Beyond Linear Funnels: Compounding Growth Loops

SkillNavora

Why linear AARRR funnels leak capital while closed growth loops build enduring enterprise value

LINEAR FUNNEL (AARRR): Acquisition Activation Retention Revenue. Linear input yields linear output. Money stops Growth stops.

COMPOUNDING LOOP: Active cohort actions automatically trigger the acquisition and activation of the next cohort. Self-reinforcing engine.

1. Viral / Collab Loop

PRODUCT-LED GROWTH

1. User signs up & creates artifact (Doc, Board, Design)
2. User shares / invites team members to collaborate
3. Invited members experience immediate product utility
4. Invited members register their own workspaces

Exemplar Companies:
Figma, Slack, Miro, Notion

Viral Coefficient (K > 1.0) & Loop Cycle Time

2. Content / SEO UGC Loop

ORGANIC INDEXING ENGINE

1. Active user posts a question, code snippet, or review
2. Platform publishes public, highly crawlable page
3. Google indexes page; captures high-intent long-tail search
4. New searchers land on page, solve problem, and create accounts

Exemplar Companies:
StackOverflow, Quora, Pinterest, Glassdoor

Crawl-to-Index Ratio & UGC Generation per Active User

3. Paid Reinvestment Loop

PERFORMANCE SCALER

1. Deploy capital to acquire user via targeted ad
2. User activates and converts to paying customer
3. Customer delivers high Lifetime Value (LTV)
4. Gross margin from LTV is reinvested to buy next user

Exemplar Companies:
Duolingo, Uber, Wealthfront

LTV : CAC Ratio (>3.0) & CAC Payback Window (<12m)

Guess the product – Retention

Retention Curves

- There is almost zero drop-off. If 100 people sign up, 95 are still there in Month 12. It looks like a straight horizontal line
- It loses 80% of users in the first 2 months. However, the 20% who remain stay for years. It looks like a steep cliff followed by a very long, stable tail
- It stays flat for a few months, then drops significantly, but then picks up and stays flat in the later months
- It is a constant downward diagonal line. It never flattens out. In Month 1 you have 50%, Month 2 you have 25%, Month 3 you have 10%, and eventually, it hits zero.

SkillNavora

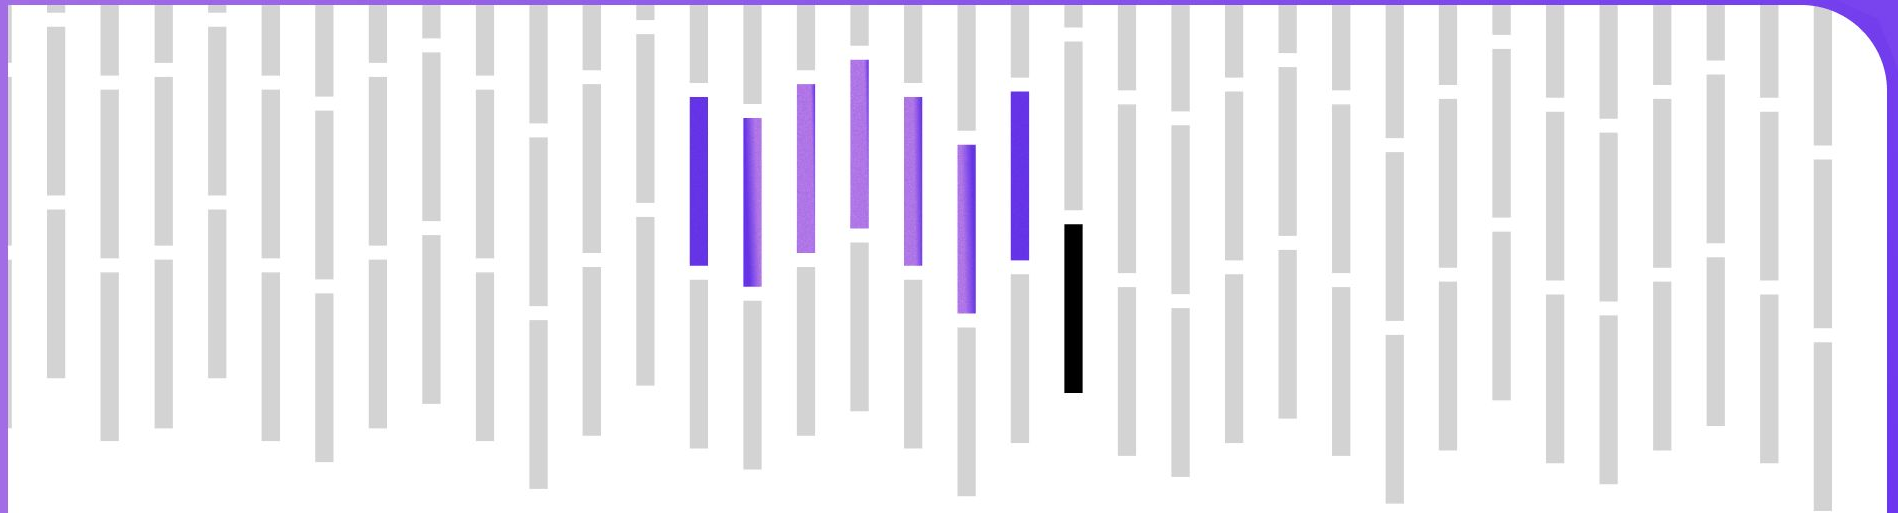

Metric Frameworks – HEART

- Happiness: Are users happy with our product?
- Engagement: Are users using our product deeply?
- Adoption: Are users using our product?
- Retention: Are users using our product repeatedly?
- Task success: Are users achieving their goals by using our product?

HEART – Example

HEART metrics for Cred (credit card payment)

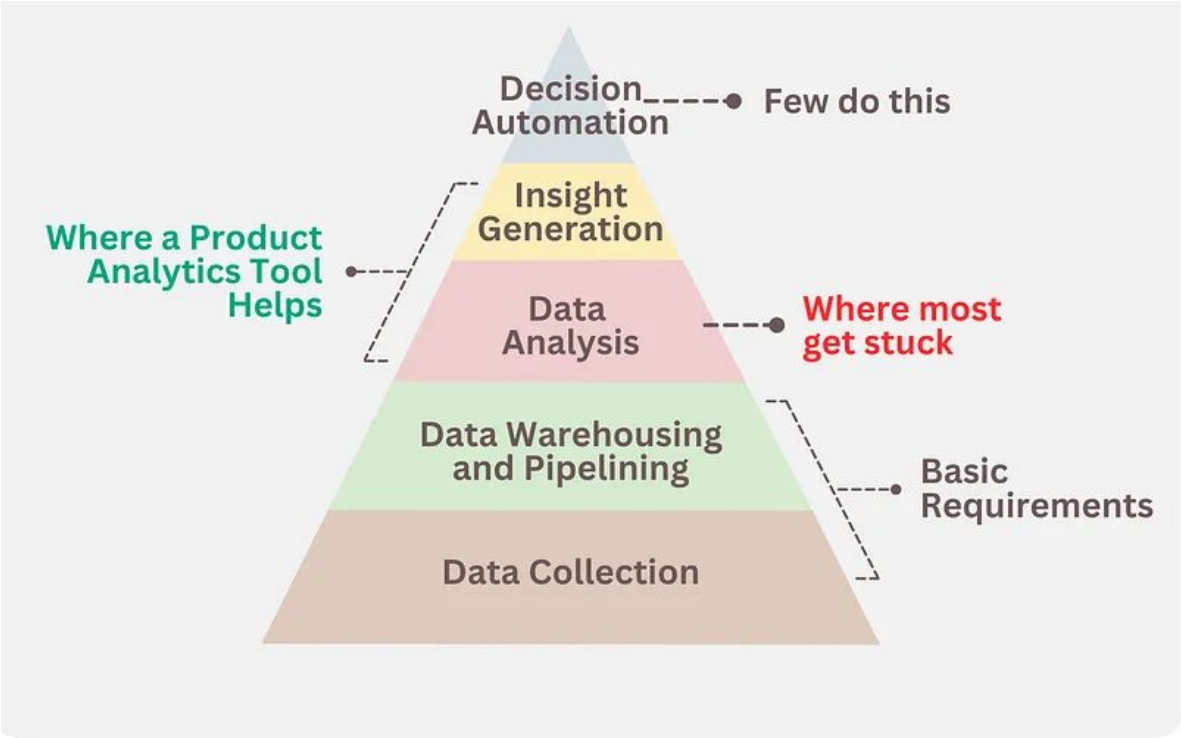

- Happiness: App store rating
- Engagement: # of users who have paid at least one credit card bill, and used at least one reward
- Adoption: # of users who pay their first credit card bill
- Retention: # of users who pay 3 consecutive credit card bills
- Task success: # of users who have avoided late payments on credit card bills

Analyzing Metrics

Hierarchy of Analytics Tools

SkillNavora

Tutorial for Mixpanel

SkillNavora

Metrics Cheat Sheet

Business metrics

- Revenue
  - Average Revenue Per User (ARPU)
  - Lifetime Value (LTV)
  - Annual Recurring Revenue (ARR)
  - Gross Merchandise Value (GMV)
  - Average Order Value (AOV)
- Costs
  - Customer Acquisition Cost (CAC)
  - Cost of Goods Sold (COGS)
  - Marketing costs
  - Fixed and Variable costs
- Profit
  - Margin: Gross, Net, Unit Contribution

Product metrics

- Acquisition: App installs, Downloads, Sign ups, Unique visitors, Bounce rate
- Activation: Active Users (MAU/WAU/DAU), Session count, Conversion rate
- Engagement: Engaged Users (MEU/WEU/DEU), Session length, Feature usage
- Retention: Week over Week (WoW), MoM, Week 4, Churn rate
- Satisfaction: Customer Satisfaction (CSAT) rating, Net Promoter Score (NPS), App Store rating, Support tickets, Bugs

SkillNavora

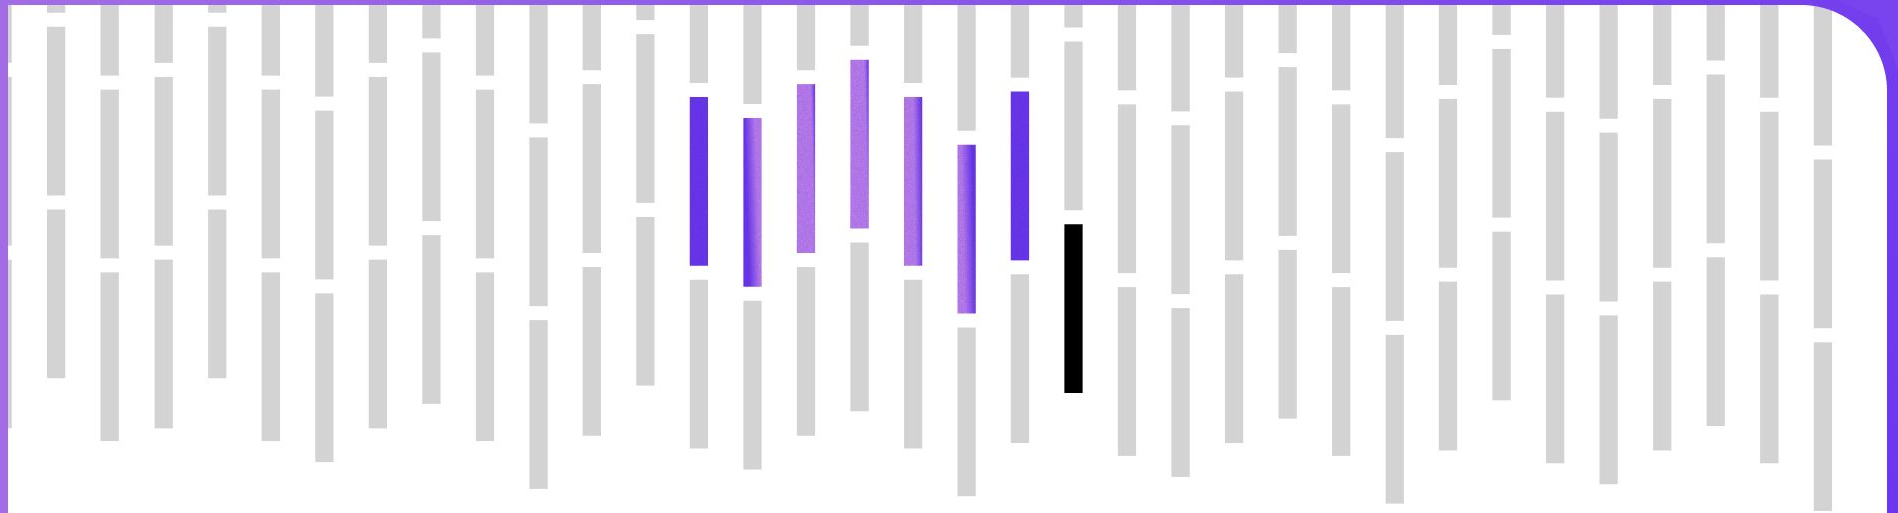

Metrics Cheat Sheet

Feature metrics

- Adoption
- Discovery: First time adopters
- Retention: Repeat adopters
- Usage funnel
- Usage heatmap
- Task completion
- Efficacy: Task success rates, Task failure rates
- Efficiency: Time to complete, Steps to complete, Cognitive load

Engineering metrics

- Latency
  - Load Times: Page Load Time (PLT), Time to Interactive (TTI), Visually Complete Time (VCT), Cold start time, Warm start time
  - E2E action latency
  - E2E action perceived latency
- Reliability
  - E2E action reliability
  - API/Service reliability
  - System availability: Mean Time to Respond (MTTR), Mean Time between Failures (MTBF), Down time
  - API throttling rate

OKRs

TED

SkillNavora

OKRs – Definition

Objectives

- Objectives are visionary goals or north stars that set a clear direction for what you aim to accomplish
- They are Significant, Concrete, Action oriented, Inspirational
- Example (Zoom): Provide Video Experience Excellence that makes every meeting feel like in-person

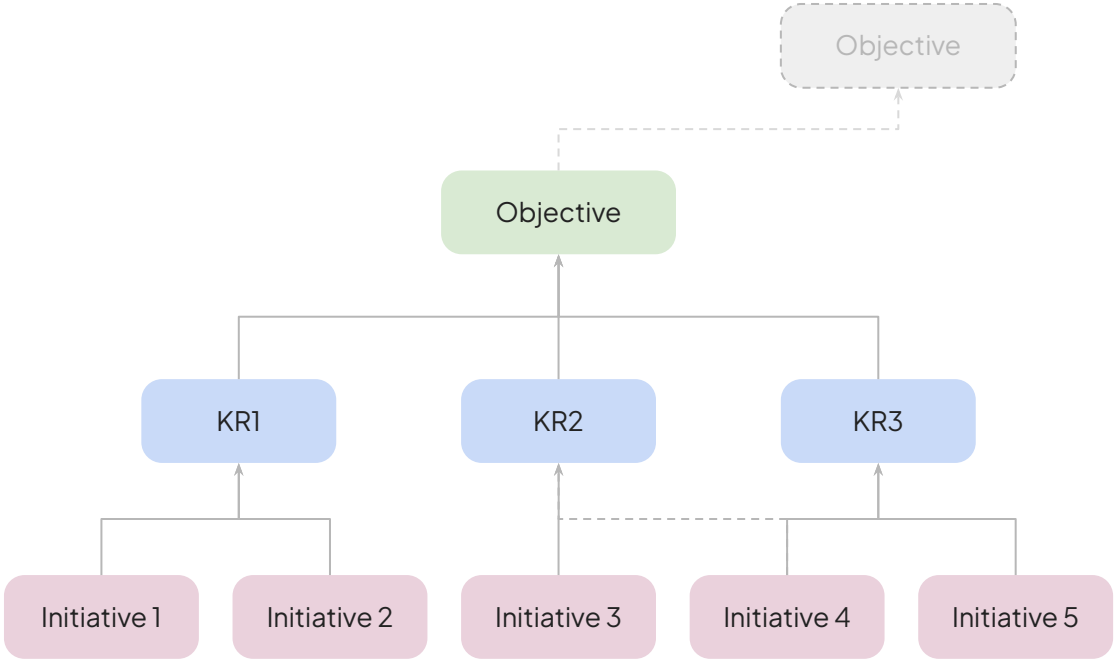

Key Results

- Key Results are time bound and measurable outcomes that track progress towards achieving the Objective
- They are Specific and Time bound, Aggressive yet Realistic, Measurable and Verifiable
- Example (Zoom): Improve call stability by reducing meeting disconnections by 30% for all calls in FY26

Book: Measure What Matters - John Doerr

SkillNavora

OKRs as a means to planning

Scope of the higher team

Scope of a team

The Execution Bridge: North Star to OKR Cascade

SkillNavora

Translating long-term company vision into quarterly objectives and weekly engineering sprints

LEVEL 1: COMPANY NORTH STAR METRIC (1 - 3 Year Strategic Horizon)

Spotify North Star: Total Monthly Listening Hours

Captures mutual value: listeners are deeply engaged; artists gain audience reach and streaming royalty payouts.

LEVEL 2: INPUT DRIVERS / L1 METRICS (Annual Portfolio Resource Allocation)

Driver 1: Discovery Breadth | Driver 2: Personalization Depth | Driver 3: Social Sharing Velocity

Decomposes the North Star into distinct, mathematically correlated input levers assigned to specific PM pillars.

LEVEL 3: TEAM-LEVEL OKRS (Quarterly Execution Focus & Accountability)

Search Team Objective: Make every search query deliver an immediate, skip-free "Magic Track"

• KR 1: Increase Day-7 skip-free playback rate from 68% to 82% • KR 2: Reduce time-to-first-song from 4.2s to 1.8s

LEVEL 4: INITIATIVES & SPRINTS (Weekly Engineering, Design & Growth Backlog)

Shipped in Bi-Weekly Sprints & Feature Experiments

• Sprint 1: Ship client-side vector search autocomplete • Sprint 2: Pre-cache top 100 personalized tracks on app launch

SkillNavora

OKRs – Example

Spotify Vision: Unlock the potential of human creativity – by giving a million creative artists the opportunity to live off their art and billions of fans the opportunity to enjoy and be inspired by it

- KR1: Support 10,000 new artists in launching their first album in FY26
- KR2: Generate $5M in artist revenue in FY26
- KR3: Reach a MAU of 1B in FY26
- KR4: Reach 10B hours of monthly streaming in FY26

SkillNavora

OKRs – Example

- O: Support 10,000 new artists in launching their first album in FY26
  - (Creator tools team) KR: Decrease average time taken to launch an album by 30% in FY26
    - I: Launch AI based creator tools suite
- O: Generate $5M in artist revenue in FY26
  - (New initiatives team) KR: Find ways to diversify up to 10% of artist revenue in FY26
    - I: Launch virtual concerts
- O: Reach a MAU of 1B in FY26
  - (Growth team) KR: Get 100M new users in FY26
    - I: Launch v2 of Spotify Wrapped
- O: Reach 10B hours of monthly streaming in FY26
  - (Recommendations team) KR: Increase average session length by 20% in FY26
    - I: Make improvements to recommendation engine through better understanding of song vibes
