19. Marketing analyst

START HERE

How to use this textbook

Marketing helps people discover a product, decide to buy it, and come back. This textbook teaches the professions as jobs with measurable results.

Merged roles

The brief lists 18 marketing roles. Some overlap, so this textbook merges them and says where each one now lives:

Role in the brief	Where it is taught
Social media manager; social media marketer	Chapter 1
Google Ads specialist; SEM specialist	Chapter 2
SEO specialist	Chapter 3
Facebook and Meta Ads specialist	Chapter 4
Email marketer	Chapter 5
Marketing automation consultant; CRM marketing specialist	Chapter 6
Marketing strategist	Chapter 7
Lead generation specialist	Chapter 8
Performance marketer	Chapter 9
CRO specialist	Chapter 10
Affiliate marketer	Chapter 11
Influencer marketer	Chapter 12
Growth marketer	Chapter 13
Local SEO consultant	Chapter 14
Marketing analyst	Chapter 15

The brief also mentions SCM and ACM. These terms are not defined in the brief and are not included; confirm their meaning before adding them.

VERIFICATION NOTE

Platform features, ad policies and prices change often. Official links were not checked live in this draft. Confirm each one, and each platform's current advertising policy, before you run a campaign or quote a client.

PART 1 · MODULE A

Marketing fundamentals and the numbers that matter

The concepts and metrics every marketing role uses, with a tested calculator.

A1. Marketing concepts and research

Market research answers three questions: who has the problem, how big the group is, and what they already use. Survey, interview and read competitor reviews.

A2. Customer personas and journeys

A persona is a short profile of a typical customer: their goal, worry, channel and budget. A journey maps the steps from first awareness to repeat purchase.

A3. Funnels: acquisition, retention, conversion

Acquisition brings people in. Conversion turns them into customers. Retention keeps them. Each stage has its own metric.

A4. The core numbers

Metric	Meaning	Formula
CAC	Cost to acquire one customer	spend / new customers
LTV	Gross profit one customer brings over time	order value × orders per year × years × margin
ROAS	Revenue per rupee of ad spend	revenue / ad spend
ROI	Return on the money put in	(gain − cost) / cost × 100

PYTHON

```
def cac(spend, new_customers):
    return round(spend / new_customers, 2) if new_customers else float("inf")

def ltv(avg_order_value, orders_per_year, years, gross_margin=1.0):
    return round(avg_order_value * orders_per_year * years * gross_margin, 2)

def roas(revenue, ad_spend):
    return round(revenue / ad_spend, 2) if ad_spend else float("inf")

def roi(gain, cost):
    return round((gain - cost) / cost * 100, 1) if cost else float("inf")

def funnel_rates(visitors, leads, customers):
    return {"visitor_to_lead_%": round(leads / visitors * 100, 1),
            "lead_to_customer_%": round(customers / leads * 100, 1) if leads else 0.0}

# Example: Rs 50,000 spend brings 125 customers
print(cac(50000, 125))          # 400.0
print(roas(180000, 60000))      # 3.0
```

A5. Brand positioning

Positioning is one sentence: for [who], [brand] is the [category] that [key benefit], unlike [alternative]. Every channel uses the same sentence.

VERIFICATION NOTE

Platform features, ad policies and prices change often. Official links were not checked live in this draft. Confirm each one, and each platform's current advertising policy, before you run a campaign or quote a client.

PART 1 · MODULE B

Marketing tools: what each one is for

Sixteen tools across social, ads, SEO, email and CRM. Confirm free and paid plans on each official page.

Tool	Use	Free	Paid	Official link (not checked live)
Meta Business Suite	Facebook and Instagram pages, inbox and ads	Free	Free to manage; ads cost money	business.facebook.com
Buffer	Scheduling and analytics	Free tier	Paid plans	buffer.com
Hootsuite	Scheduling and team workflows	Trial	Paid plans	www.hootsuite.com
Later	Visual scheduling	Free tier	Paid plans	later.com
Metricool	Analytics and scheduling	Free tier	Paid plans	metricool.com
Canva	Graphics for posts	Free	Paid plans	www.canva.com
Google Ads	Search, display, YouTube, shopping ads	Free account	Pay per click or impression	ads.google.com
Google Skillshop	Official Google Ads and Analytics training	Free	Free	skillshop.withgoogle.com
Google Search Console	Search performance and indexing	Free	Free	search.google.com/search-console
Google Analytics	Website analytics	Free	Paid 360 tier for large firms	analytics.google.com
Ahrefs	SEO research and backlinks	Free tools	Paid plans	ahrefs.com
Semrush	SEO and marketing research	Free tools	Paid plans	www.semrush.com
Screaming Frog	Technical SEO crawler	Free (limited)	Paid licence	www.screamingfrog.co.uk/seo-spider/
Mailchimp	Email campaigns	Free tier	Paid plans	mailchimp.com
Brevo	Email and SMS	Free tier	Paid plans	www.brevo.com
HubSpot	CRM, email, marketing automation	Free CRM tier	Paid plans	www.hubspot.com
Klaviyo	E-commerce email and automation	Free tier	Paid plans	www.klaviyo.com

VERIFICATION NOTE

Platform features, ad policies and prices change often. Official links were not checked live in this draft. Confirm each one, and each platform's current advertising policy, before you run a campaign or quote a client.

PART 2 · MANDATORY PROJECT

Project: a 30-day social media plan for a fictional business

A complete plan for a fictional tutoring centre, with a calendar, captions, graphics and reporting.

Brief

A tutoring centre wants four weeks of posts to grow followers and free-trial bookings. Budget: organic only.

Plan

Week	Theme	Content	Metric
Week 1	Introduce the owner and the problem they solve	3 posts, 1 short video	Reach and profile visits
Week 2	Teach one useful tip per post	3 carousels, 1 reel	Saves and shares
Week 3	Show customers and results (with permission)	3 posts, 2 stories	Comments and enquiries
Week 4	Offer and call to action	3 posts, 1 live or reel	Bookings and messages

Caption template

```
Hook (one line). Problem. Tip or proof. Call to action. Three hashtags at most.
```

Reporting

Each Friday, record reach, saves, shares, enquiries and bookings per post. Keep the best format and drop the weakest after two weeks.

ASSIGNMENT

Your 30-day plan

Choose a fictional business, write four themes, a 12-post calendar and a reporting sheet.

SOLUTION (ANSWER KEY)

A complete plan has a theme per week, a mix of formats, one call to action per post, and a weekly metric. The table above is one valid answer for the tutoring centre. Check your plan against the tool limits of the platform you choose (confirm on its official help page).

VERIFICATION NOTE

Platform features, ad policies and prices change often. Official links were not checked live in this draft. Confirm each one, and each platform's current advertising policy, before you run a campaign or quote a client.

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 1

Social media manager

Profession 1 of 10 in Development and IT.

What the profession means

A social media manager plans, creates, publishes and reports on a brand's social channels, including social media marketing for small businesses.

What professionals do every day

Plans the content calendar, writes captions, briefs graphics, schedules posts, replies to comments and messages, and reports results monthly.

Why businesses hire them, and what problems they solve

Brands need steady, relevant presence and fast replies. A manager keeps the channels active and measures what drives enquiries.

- Inconsistent posting that loses followers.
- Comments and messages left unanswered.
- Content that gets reach but no enquiries.

Skills you need

- Content planning and formats.
- Captioning and hashtags.
- Basic graphic design (Canva).
- Analytics and reporting.
- Strong ability with spreadsheets and the platform's native tools

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Meta Business Suite	Facebook and Instagram management	Free	Ads cost extra	business.facebook.com
Buffer	Scheduling	Free tier	Paid plans	buffer.com
Canva	Graphics	Free	Paid plans	www.canva.com
Metricool	Analytics	Free tier	Paid plans	metricool.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Post a week of content for one account.
Intermediate	Reply to 20 comments with a consistent voice.

Advanced	Produce a monthly report with three findings.

Projects by level

- **Beginner:** Monthly content package for a café.
- **Intermediate:** Community management for a clinic.
- **Advanced:** Launch campaign for a course.

Client-ready portfolio project

The 30-day plan project (Part 2) plus a monthly report with three findings and three next actions.

Worked example

Worked example. A post with a three-line hook performs better than a long caption. The manager tests two hooks on similar posts and keeps the winner.

Assignment with full solution

ASSIGNMENT

Monthly report with findings

Business problem: A café's monthly report must show what worked.

Steps

1. Pull reach, saves and enquiries per post for the month.
2. Rank the top three posts and explain why they worked.
3. Name three actions for next month.
4. Write the report in one page.

Expected output: A one-page report with data and actions.

SOLUTION (ANSWER KEY)

The report ties each finding to a number and each action to a finding. Saves and enquiries matter more than likes for this client.

Common mistakes

- Posting without a plan.
- Chasing likes instead of enquiries.
- Using stolen images or music.
- Replying late to customers.

Freelancing opportunities

- Monthly retainers for small brands.
- Launch campaigns and content packages.

- Briefs for 'social media manager', 'Instagram management', 'content calendar'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Meta Blueprint (official learning)
- Google Skillshop

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 2

Google Ads specialist (including SEM)

Profession 2 of 10 in Development and IT.

What the profession means

A Google Ads specialist builds and manages paid search, display, YouTube and shopping campaigns. Search engine marketing (SEM) is the paid search part of this work and is taught here.

What professionals do every day

Researches keywords, writes ads, sets budgets and bids, adds negative keywords, tracks conversions and reports cost per result.

Why businesses hire them, and what problems they solve

Paid search reaches people who are looking for a solution now. A specialist controls cost and matches ads to intent.

- Budgets spent on irrelevant searches.
- Conversions not tracked, so results cannot be judged.
- Landing pages that do not match the ad.

Skills you need

- Account and campaign structure.
- Keyword research and match types.
- Negative keywords and search terms reports.
- Conversion tracking.
- Bidding and budgets.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Ads	Search, display, YouTube, shopping	Free account	Pay per click	ads.google.com
Google Skillshop	Official training and certificates	Free	Free	skillshop.withgoogle.com
Google Keyword Planner	Keyword ideas (inside Google Ads)	Free with account	Pay per click	ads.google.com
Google Analytics	Conversion measurement	Free	Paid 360 tier	analytics.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Build one search campaign with three ad groups.

Intermediate	Add negative keywords from a search terms report.
Advanced	Set up conversion tracking and test with one enquiry.

Projects by level

- **Beginner:** Local service search campaign.
- **Intermediate:** E-commerce shopping feed.
- **Advanced:** Course enrolment campaign.

Client-ready portfolio project

A search campaign for a fictional clinic: structure, 15 keywords, negative list, two responsive ads per group, conversion tracking plan and a budget with a stop rule.

Worked example

Worked example. A clinic's campaign spends Rs 60,000 for 40 enquiries: cost per enquiry Rs 1,500. Conversions are counted only when a form is submitted, so the number is trustworthy.

PYTHON

```
from marketing_metrics import cac
print(cac(60000, 40))   # 1500.0 : cost per enquiry in this example
```

Assignment with full solution

ASSIGNMENT

Campaign with a stop rule

Business problem: A clinic wants search ads without wasting budget.

Steps

1. Choose 15 keywords in three themes.
2. Write the negative keyword list before launch.
3. Set a daily budget and a stop rule: pause any keyword with Rs 2,000 spend and no enquiry.
4. Confirm conversion tracking with a test enquiry.

Expected output: The campaign plan with its stop rule and the test result.

SOLUTION (ANSWER KEY)

The stop rule protects the budget. Negative keywords block irrelevant searches such as 'free' when the clinic charges fees. The tracked test enquiry proves conversions are recorded.

Common mistakes

- Broad match everywhere without negatives.
- No conversion tracking.
- Sending ads to the homepage instead of a matching page.

- Judging a campaign after two days.

Freelancing opportunities

- Search campaigns for local businesses and course providers.
- Ad audits for existing accounts.
- Briefs for 'Google Ads', 'PPC', 'search ads', 'SEM'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Google Skillshop (official)
- Google Ads Help

SEO specialist

Profession 3 of 10 in Development and IT.

What the profession means

An SEO specialist improves how a website appears in search results: technical health, content that matches what people search for, and authority from other sites.

What professionals do every day

Runs audits, researches search intent, plans content, fixes technical issues, tracks rankings and traffic, and reports progress in Search Console and Analytics.

Why businesses hire them, and what problems they solve

Most buyers begin with a search. Good SEO brings steady, low-cost visits that keep working after the work is done.

- Pages search engines cannot find or understand.
- Content that does not match search intent.
- Slow pages and broken links.

Skills you need

- How search engines crawl, index and rank.
- Keyword research and search intent.
- On-page and technical SEO.
- Analytics and Search Console.
- Content strategy and link building ethics.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Search Console	Indexing and search performance	Free	Free	search.google.com/search-console
Google Analytics	Traffic and conversions	Free	Paid 360 tier	analytics.google.com
Screaming Frog	Technical crawling	Free (limited)	Paid licence	www.screamingfrog.co.uk/seo-spider/
Ahrefs	Keyword and backlink research	Free tools	Paid plans	ahrefs.com
Semrush	SEO research	Free tools	Paid plans	www.semrush.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Audit one page: title, description, headings, speed.
Intermediate	Research 20 keywords with intent labels.
Advanced	Write one optimised page for one search intent.

Projects by level

- **Beginner:** Local business site audit.
- **Intermediate:** Blog content plan.
- **Advanced:** Ecommerce category optimisation.

Client-ready portfolio project

The SEO audit and optimisation plan (Part 2 project), applied to a fictional bakery site.

Worked example

Worked example. The phrase 'bakery in Pune' is local intent: the page needs the city, opening hours and a map, not a general history of bread.

Assignment with full solution

ASSIGNMENT

SEO audit and optimisation plan

Business problem: A local bakery's website gets few visits from search. Find the technical and content problems and rank the fixes.

Steps

1. Check that the homepage and key pages are indexed in Google Search Console (official tool).
2. Crawl the site with a crawler (for example Screaming Frog free mode, up to its limit) and list broken links, missing titles and duplicate descriptions.
3. Check page speed on mobile with PageSpeed Insights (official tool).
4. List the target search phrases for each page (for example 'bakery in [city]').
5. Rank the fixes by effort and impact and write a 30-day plan.

Expected output: An audit table with issues, evidence, fix, owner, effort and impact, plus the 30-day plan.

SOLUTION (ANSWER KEY)

A good audit starts with indexing (can search engines reach the pages?), then technical health (broken links, titles, speed), then content (does each page match one search intent?). Ranking fixes by impact and effort gives the client a clear first month. The sample audit table lists, for example:

missing meta description on 'Menu' (low effort, medium impact); slow images on the homepage (medium effort, high impact); no local business profile (low effort, high impact for local search).

Common mistakes

- Keyword stuffing that reads badly.
- Buying links from low-quality sites.
- Ignoring mobile speed.
- Changing URLs without redirects.

Freelancing opportunities

- SEO audits and monthly retainers.
- Local business SEO (see Chapter 14).
- Briefs for 'SEO', 'keyword research', 'technical SEO audit'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Google Search Central documentation
- Search Console Help

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 4

Facebook and Meta Ads specialist

Profession 4 of 10 in Development and IT.

What the profession means

A Meta Ads specialist builds and manages paid campaigns on Facebook, Instagram and Messenger using Meta Ads Manager, with audiences, creative tests and conversion tracking.

What professionals do every day

Plans objectives, builds audiences, writes and tests creatives, sets budgets, reads the results and adjusts or pauses ads.

Why businesses hire them, and what problems they solve

Meta reaches large audiences cheaply when the creative and the offer are right. A specialist finds the combination that works and stops the rest.

- Ads with no clear objective.
- Creative that fatigues after a week.
- No pixel or conversion tracking.

Skills you need

- Business Manager and ad accounts.
- Campaign objectives and audiences.
- Creative testing and A/B tests.
- Meta Pixel and Conversions API.
- Reporting and budget control.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Meta Business Suite	Pages and ads	Free to manage	Ads cost money	business.facebook.com
Meta Ads Manager	Campaign builder	Free	Pay per result	www.facebook.com/adsmanager
Meta Blueprint	Official training	Free and paid courses	Check current fees	www.facebook.com/business/learn
Canva	Ad creatives	Free	Paid plans	www.canva.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Set up a pixel and test with one visit.
Intermediate	Run three creatives in one ad set and compare.

Advanced	Build a retargeting audience of website visitors.

Projects by level

- **Beginner:** Local service lead campaign.
- **Intermediate:** E-commerce catalogue ads.
- **Advanced:** Course enrolment campaign with video ads.

Client-ready portfolio project

A Meta campaign plan for a fictional clinic: objective, audiences, three creative tests, budget with a stop rule and a reporting sheet.

Worked example

Worked example. Three creatives, equal budget, one week. The best cost per lead wins, and the weaker two are paused. A new creative replaces the winner after it starts to fatigue.

PYTHON

```
from marketing_metrics import cac
print(cac(21000, 14))   # 1500.0 cost per lead for the winning creative
```

Assignment with full solution

ASSIGNMENT

Creative test with a stop rule

Business problem: A clinic wants to know which of three ad designs gets the cheapest enquiry.

Steps

1. Build one campaign with three ad variants, equal budget.
2. Run for seven days and record leads for each.
3. Pause any variant more than 50% above the best cost per lead after three days.
4. Report the winner and the cost per lead.

Expected output: A test report and the decision.

SOLUTION (ANSWER KEY)

Equal budgets make the comparison fair. The stop rule limits waste while the test runs. The decision uses cost per lead, not clicks.

Common mistakes

- Changing too many things at once.
- Judging a test in one day.
- Ignoring privacy and consent rules for custom audiences.
- Not tracking conversions.

Freelancing opportunities

- Meta ad management retainers.
- Creative testing for e-commerce.
- Briefs for 'Facebook ads', 'Instagram ads', 'Meta Ads'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Meta Blueprint (official)

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 5

Email marketer

Profession 5 of 10 in Development and IT.

What the profession means

An email marketer builds lists, writes campaigns and automated sequences, segments audiences and measures results, with consent at every step.

What professionals do every day

Grows opt-in lists, writes subject lines and copy, builds welcome and abandoned-cart flows, schedules newsletters and analyses opens, clicks and sales.

Why businesses hire them, and what problems they solve

Email has high return for many businesses when people have opted in. A good sequence turns interest into a first purchase.

- Lists bought or built without consent.
- Emails with weak subject lines and no clear action.
- Flows that send the wrong message at the wrong time.

Skills you need

- Consent and data protection.
- Segmentation.
- Copywriting for email (AIDA, PAS).
- Automation flows.
- Deliverability and performance analysis.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Mailchimp	Campaigns and basic automation	Free tier	Paid plans	mailchimp.com
Brevo	Email and SMS	Free tier	Paid plans	www.brevo.com
HubSpot	CRM and email	Free tier	Paid plans	www.hubspot.com
Klaviyo	E-commerce flows	Free tier	Paid plans	www.klaviyo.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Write three subject lines and test two.
Intermediate	Build a three-email welcome sequence.
Advanced	Clean a list: remove invalid addresses and unsubscribes.

Projects by level

- **Beginner:** Newsletter for a clinic.
- **Intermediate:** Abandoned-cart flow for a shop.
- **Advanced:** Course launch sequence.

Client-ready portfolio project

A welcome sequence of three emails for a fictional course provider, with segmentation, consent wording and one A/B test plan.

Worked example

Worked example. A subject line 'Your free checklist is here' tested against 'Three mistakes to avoid this month': the test measures opens, and the winner is used for the next send.

Assignment with full solution

ASSIGNMENT

Welcome sequence with consent

Business problem: A course provider needs a three-email welcome sequence for new subscribers.

Steps

1. Write the consent sentence shown at sign-up.
2. Write three emails: welcome with the free resource, a useful tip, an offer.
3. Set delays of 0, 2 and 5 days.
4. Add an unsubscribe link and a sender name the reader recognises.

Expected output: Three emails with subject lines, delays and consent text.

SOLUTION (ANSWER KEY)

The sequence gives value before the offer. The consent sentence says what the person signed up for. The unsubscribe link is required in every email.

Common mistakes

- Buying lists.
- Sending without unsubscribe links.
- Emailing too often.
- Never cleaning the list.

Freelancing opportunities

- Email sequences for course and product launches.
- Monthly newsletter services.
- Briefs for 'email marketing', 'Mailchimp', 'Klaviyo'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Mailchimp resources
- HubSpot Academy (check current courses)

Marketing automation and CRM specialist

Profession 6 of 10 in Development and IT.

What the profession means

A marketing automation and CRM specialist designs how leads move through the business: scoring, routing, follow-up and reporting in a CRM, with automation tools connecting them.

What professionals do every day

Defines lead stages, builds automations and CRM pipelines, sets scoring rules, connects forms and channels, and reports on pipeline and sales handoff.

Why businesses hire them, and what problems they solve

Leads often go cold because no one follows up on time. Automation and a clear pipeline close the gap between marketing and sales.

- Leads lost between marketing and sales.
- Manual follow-up that is late or missed.
- Pipelines nobody can read.

Skills you need

- Pipeline stages and lead scoring.
- CRM basics (HubSpot free CRM, Zoho).
- Automation tools (n8n, Make, Zapier).
- Data quality and consent.
- Reporting.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
HubSpot CRM	CRM and marketing automation	Free CRM tier	Paid plans	www.hubspot.com
Zoho CRM	CRM for small teams	Free plan	Paid plans	www.zoho.com/crm/
n8n	Custom automations	Self-hosted free	Cloud plans	n8n.io
Make	Visual automations	Free tier	Paid plans	www.make.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Build a five-stage pipeline in a free CRM.
Intermediate	Automate a lead alert to a salesperson.
Advanced	Create a lead score with three rules.

Projects by level

- **Beginner:** Sales pipeline for a training firm.
- **Intermediate:** Lead routing for a property agency.
- **Advanced:** Follow-up automation for a clinic.

Client-ready portfolio project

A lead-to-sale system for a fictional education company: pipeline, scoring rules, routing, a follow-up automation and a weekly dashboard.

Worked example

Worked example. Score: +2 for a call request, +1 for an email open, +3 for a visit to the price page. A lead at 5 points goes to a salesperson within an hour.

Assignment with full solution

ASSIGNMENT

Lead scoring and alert

Business problem: A training firm wants hot leads to reach sales quickly.

Steps

1. Define three scoring rules with points.
2. Set an alert threshold at 5 points.
3. Route the alert to the owner of the lead's region.
4. Test with three sample leads: low, threshold, high.

Expected output: The rules, the threshold and the three test results.

SOLUTION (ANSWER KEY)

Three rules keep the score easy to explain. The threshold is tested with a lead exactly at the limit, which is where mistakes happen.

Common mistakes

- Scoring rules nobody can explain.
- Duplicated leads.
- Automation without consent checks.
- No handover from marketing to sales.

Freelancing opportunities

- CRM setup and automation for small firms.
- Pipeline audits.
- Briefs for 'HubSpot', 'CRM setup', 'marketing automation'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- HubSpot Academy
- Zoho CRM training

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 7

Marketing strategist

Profession 7 of 10 in Development and IT.

What the profession means

A marketing strategist decides where a business should spend effort: the audience, the message, the channels, the budget and the measures of success.

What professionals do every day

Runs market research, sets goals, writes the plan, allocates budget across channels, reviews results and adjusts the plan every quarter.

Why businesses hire them, and what problems they solve

A business with limited money needs to choose. A strategist ranks options by expected return and risk, and says what to stop.

- Spending spread across too many channels.
- Goals with no measure.
- Plans nobody follows.

Skills you need

- Market research and competitor review.
- Positioning and messaging.
- Budget allocation and scenarios.
- Quarterly planning and OKRs.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Miro	Strategy workshops and maps	Free tier	Paid plans	miro.com
Google Sheets	Budget and scenario models	Free	Paid plans	sheets.google.com
HubSpot Marketing Hub	Campaign planning (free tiers vary)	Free tier	Paid plans	www.hubspot.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Write a one-page positioning statement.
Intermediate	Build a three-scenario budget model.
Advanced	Set one quarterly goal with three measures.

Projects by level

- **Beginner:** Plan for a training firm.
- **Intermediate:** Launch plan for a clinic.
- **Advanced:** Growth plan for an online shop.

Client-ready portfolio project

A one-year marketing plan for a fictional firm: positioning, three channels with budgets, three scenarios and a quarterly review schedule.

Worked example

Worked example. A budget of Rs 3 lakh over six months split across search (40%), social (30%), email (10%) and testing (20%), with a rule: move 10% from any channel with a CAC above target.

Assignment with full solution

ASSIGNMENT

Budget with scenarios

Business problem: A firm has Rs 3 lakh for six months and needs a plan that adapts.

Steps

1. Split the budget across three channels.
2. Model a best, expected and weak scenario for leads.
3. Write the rule for moving money between channels.
4. Summarise the plan in one page.

Expected output: A budget model with three scenarios and a one-page plan.

SOLUTION (ANSWER KEY)

Scenarios show the range of outcomes; the rule decides when to move money. The plan states what would make the team change course.

Common mistakes

- A plan without a review date.
- Equal budgets for unequal channels.
- Ignoring the cost of staff time.
- Copying a competitor's plan without knowing its numbers.

Freelancing opportunities

- Strategy sprints for small firms.
- Quarterly planning retainers.
- Briefs for 'marketing strategy', 'go-to-market plan', 'marketing plan'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 8

Lead generation specialist

Profession 8 of 10 in Development and IT.

What the profession means

A lead generation specialist designs offers, pages and campaigns that turn strangers into named prospects, with consent, and passes them to sales with a score.

What professionals do every day

Creates lead magnets, landing pages and forms, runs campaigns to them, checks conversion rates, and maintains the handover to sales.

Why businesses hire them, and what problems they solve

Sales teams cannot close what they do not have. Lead generation fills the pipeline with qualified contacts at a known cost.

- Low-quality leads that sales ignore.
- Forms that ask for too much.
- No measure of cost per lead.

Skills you need

- Offer design and lead magnets.
- Landing page conversion.
- Forms and consent.
- Lead scoring and handover.
- Cost per lead tracking.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Forms	Simple lead forms	Free	Free	forms.google.com
Tally	Forms with logic	Free tier	Paid plans	tally.so
Unbounce	Landing pages (verify plans)	Trial	Paid plans	unbounce.com
HubSpot	Forms and CRM	Free tier	Paid plans	www.hubspot.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Write one lead magnet and one headline.
Intermediate	Build a form with four fields and consent.
Advanced	Calculate cost per lead for one campaign.

Projects by level

- **Beginner:** Education lead system.
- **Intermediate:** Real estate enquiry page.
- **Advanced:** Clinic appointment funnel.

Client-ready portfolio project

The lead generation system project (Part 2) for an education company: offer, page, form, scoring, sequence and a weekly funnel report.

Worked example

Worked example. 4,000 visitors, 200 leads, 20 customers: 5% of visitors become leads and 10% of leads buy. The funnel check is the arithmetic in Module A.

PYTHON

```
from marketing_metrics import funnel_rates
print(funnel_rates(visitors=4000, leads=200, customers=20))
```

Assignment with full solution

ASSIGNMENT

Lead generation system for an education company

Business problem: An education company wants more paid enrolments from its website. Design the system: offer, page, form, follow-up and measurement.

Steps

1. Write one lead magnet (for example a free checklist) and one landing page headline.
2. Build the form with consent and the fields you truly need.
3. Set up an automated thank-you email and a follow-up sequence of three messages.
4. Score leads: for example +2 for a call request, +1 for opening email, 0 otherwise.
5. Measure the funnel each week and record the rates.

Expected output: A landing page plan, form fields, a follow-up sequence and a weekly funnel report.

SOLUTION (ANSWER KEY)

Funnel check with sample numbers: 4,000 visitors give 200 leads (5.0%), and 20 of those become customers (10.0%). The arithmetic is tested in the calculator from Module A.

PYTHON

```
from marketing_metrics import funnel_rates
print(funnel_rates(visitors=4000, leads=200, customers=20))
# {'visitor_to_lead_%': 5.0, 'lead_to_customer_%': 10.0}
```

Common mistakes

- Asking for too many form fields.
- Buying lists without consent.
- Passing leads to sales without context.
- Not tracking which source brings buyers.

Freelancing opportunities

- Lead systems for education and real estate firms.
- Landing page and funnel builds.
- Briefs for 'lead generation', 'landing page', 'funnel'.

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 9

Performance marketer

Profession 9 of 10 in Development and IT.

What the profession means

A performance marketer manages paid campaigns against measured results: cost per acquisition, return on ad spend and payback, shifting budget to what works.

What professionals do every day

Sets targets, runs tests across channels, reads the numbers daily, moves budget, and reports return to the client.

Why businesses hire them, and what problems they solve

Clients pay for results. A performance marketer keeps the spend tied to revenue and stops losing money quickly.

- Spend without a target.
- Decisions made on clicks instead of revenue.
- Reports that hide the cost.

Skills you need

- Targets: CAC, ROAS, payback period.
- Campaign testing and budget rules.
- Attribution basics.
- Reporting to clients.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Ads	Search and shopping campaigns	Free account	Pay per click	ads.google.com
Meta Ads Manager	Social campaigns	Free	Pay per result	www.facebook.com/adsmanager
Google Looker Studio	Dashboards	Free	Free	lookerstudio.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Compute CAC and ROAS for one campaign.
Intermediate	Set a budget rule with a stop threshold.
Advanced	Build a one-page weekly dashboard.

Projects by level

- **Beginner:** E-commerce performance account.
- **Intermediate:** Lead campaign for a clinic.
- **Advanced:** Course enrolment campaign.

Client-ready portfolio project

A performance report for a fictional shop with CAC, ROAS, payback and a budget rule, with three recommended changes.

Worked example

Worked example. A campaign spends Rs 60,000 and earns Rs 180,000 in revenue. ROAS is 3.0; the return on the money is 200%. The rule decides whether to scale.

PYTHON

```
from marketing_metrics import roas, roi
print(roas(180000, 60000))   # 3.0
print(roi(180000, 60000))    # 200.0
```

Assignment with full solution

ASSIGNMENT

Performance report with a budget rule

Business problem: A shop must decide whether to increase spend on a campaign.

Steps

1. Calculate ROAS and ROI for the last month.
2. Set the rule: scale when ROAS is above 3.0 for two weeks.
3. Apply the rule to two campaigns.
4. Write the recommendation for the client.

Expected output: A report with the two results and the decision.

SOLUTION (ANSWER KEY)

The rule removes guesswork. A campaign with ROAS above the threshold for two weeks can receive more budget; one below it is reduced. The report states both numbers and the decision.

Common mistakes

- Scaling a campaign after one good day.
- Ignoring margin when reading ROAS.
- Hiding costs such as staff time.
- No test budget for new ideas.

Freelancing opportunities

- Performance retainers for e-commerce shops.
- Campaign audits.
- Briefs for 'performance marketing', 'ROAS', 'Google and Meta ads'.

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 10

CRO specialist

Profession 10 of 10 in Development and IT.

What the profession means

A conversion rate optimisation (CRO) specialist improves the share of visitors who take the desired action, by testing pages, forms and offers.

What professionals do every day

Reviews analytics, forms heatmaps, plans tests, runs A/B tests with enough traffic, and implements winning changes.

Why businesses hire them, and what problems they solve

More conversions from the same traffic lower the cost per customer. CRO is often the cheapest growth available.

- Tests with too little traffic to trust.
- Changes made without a hypothesis.
- Forms that lose people on mobile.

Skills you need

- Funnel analysis.
- Hypothesis writing.
- A/B testing and sample size.
- Usability and accessibility.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Analytics	Funnel analysis	Free	Paid 360 tier	analytics.google.com
Microsoft Clarity	Heatmaps and recordings	Free	Free	clarity.microsoft.com
Hotjar	Heatmaps and surveys	Free tier	Paid plans	www.hotjar.com
Optimizely	Experiments (enterprise focus)	Trial	Paid plans	www.optimizely.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Write one hypothesis with the reason from data.
Intermediate	Analyse one funnel step with analytics.
Advanced	Plan one A/B test with a sample size.

Projects by level

- **Beginner:** Checkout test for a shop.
- **Intermediate:** Form test for a clinic.
- **Advanced:** Landing page test for a course.

Client-ready portfolio project

A CRO report for a fictional shop: funnel analysis, three hypotheses ranked by impact, one A/B test plan with a sample size and a decision rule.

Worked example

Worked example. 30% of mobile users abandon the form at the phone field. Hypothesis: a clearer phone field with a country code selector will reduce abandonment. The test runs until each variant has enough visitors to compare fairly.

Assignment with full solution

ASSIGNMENT

A/B test plan with a decision rule

Business problem: A clinic wants to test a shorter booking form.

Steps

1. Write the hypothesis and the metric (form completion).
2. Estimate the visitors needed for each variant.
3. Set the rule: switch only if the gain is clear and the test ran for at least two weeks.
4. Record the result and the decision.

Expected output: The test plan and the rule.

SOLUTION (ANSWER KEY)

Deciding the rule before the test prevents fooling yourself. Sample size and duration come from the expected difference, so a small test does not produce a false winner.

Common mistakes

- Stopping a test as soon as one variant leads.
- Testing many changes at once with no plan.
- Ignoring accessibility.
- No record of past tests.

Freelancing opportunities

- CRO audits and testing for e-commerce and lead pages.
- Briefs for 'CRO', 'A/B testing', 'conversion optimisation'.

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 11

Affiliate marketer (including Shopify affiliate programmes)

Profession 11 of 10 in Development and IT.

What the profession means

An affiliate marketer earns a commission by promoting other businesses' products or services through a tracked link. On e-commerce platforms such as Shopify, merchants run affiliate programmes that pay partners for sales they bring.

What professionals do every day

Chooses products or programmes, creates honest content, places tracked links, tracks clicks and sales, follows the programme's rules and discloses the affiliate relationship.

Why businesses hire them, and what problems they solve

Merchants pay only for results, so affiliate work suits people who can explain products well and build an audience with trust.

- Promoting products the audience does not need.
- Hidden affiliate links that break disclosure rules.
- Programmes with unclear commission rules.

Skills you need

- Choosing programmes and reading terms.
- Honest product content and reviews.
- Tracking links and attribution.
- Disclosure rules in your country and platform.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Shopify affiliate programme	Partners earn commission on referred Shopify sales (check current terms)	Free to join	Commission-based	www.shopify.com/affiliates
Amazon Associates	Commission on referred purchases (check terms)	Free to join	Commission-based	affiliate-program.amazon.in
Impact	Affiliate network (verify plans)	Trial	Paid plans	impact.com
Google Analytics	Track referral traffic	Free	Paid 360 tier	analytics.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish

Beginner	Read one affiliate programme's terms and list five rules.
Intermediate	Write one honest review with pros and cons.
Advanced	Set up tracking and check one referral click.

Projects by level

- **Beginner:** Review blog for a niche.
- **Intermediate:** Video review series.
- **Advanced:** Email recommendations with disclosure.

Client-ready portfolio project

An affiliate content plan for a fictional blog: programme choice, one honest review, disclosure text and a tracking check.

Worked example

How it works in practice. A reader clicks your tracked link, buys, and the programme records the sale and pays a commission based on the rule (for example a percentage of the sale, or a fixed amount). The merchant sets the rules; you must follow them and disclose the relationship.

SHOPIFY AND RESALE MODELS

Some platforms let people resell products they do not hold, or run affiliate or reseller programmes for suppliers. Their terms, fees and legal requirements differ and change. Verify the official rules on the platform's own site before you start, and take tax advice on the income.

Assignment with full solution

ASSIGNMENT

Affiliate content with disclosure

Business problem: A blogger wants to earn commissions from one shopping programme.

Steps

1. Read the programme's terms and list the commission basis, the cookie window and the banned tactics.
2. Write one review with three honest pros and three honest cons.
3. Add a clear disclosure sentence near the link.
4. Check that the tracked link records one test click.

Expected output: The terms summary, the review, the disclosure and the tracking check.

SOLUTION (ANSWER KEY)

The review is honest about the product's weaknesses, which builds trust and protects you from complaints. The disclosure is visible without scrolling. The tracking check confirms the link works before publication.

Common mistakes

- Hiding disclosures.
- Making income claims.
- Promoting unverified products.
- Ignoring the programme's rules on paid ads or brand terms.

Freelancing opportunities

- Affiliate content plans for niche sites.
- Shopify partner-referral strategies (verify terms first).
- Briefs for 'affiliate marketing', 'content writing for affiliates', 'Shopify affiliate'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Shopify affiliate programme (official)
- FTC: disclosures 101 for social media (US guidance, for reference)

Influencer marketer

Profession 12 of 10 in Development and IT.

What the profession means

An influencer marketer plans and manages partnerships with creators who reach a specific audience, with clear briefs, disclosure and measurable results.

What professionals do every day

Finds creators whose audience fits, negotiates terms, writes briefs, checks disclosure, tracks links and codes, and reports results.

Why businesses hire them, and what problems they solve

Trusted voices sell products that adverts cannot. A good influencer manager matches the creator and the audience and measures the outcome.

- Creators whose audience does not match the product.
- Undisclosed paid posts.
- Results that cannot be traced.

Skills you need

- Audience research and creator vetting.
- Briefing and contracts.
- Disclosure rules.
- Tracking with codes and links.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Creator search tools (verify)	Find creators by audience (check current plans)	Varies	Paid plans	www.modash.io
Canva	Brief templates	Free	Paid plans	www.canva.com
Google Analytics	Track referral traffic	Free	Paid 360 tier	analytics.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Vet five creators: audience fit, engagement, past sponsors.
Intermediate	Write a one-page brief with dos and don'ts.
Advanced	Track one campaign with a discount code.

Projects by level

- **Beginner:** Campaign for a local café.
- **Intermediate:** Product launch with micro-creators.
- **Advanced:** Course awareness with educators.

Client-ready portfolio project

A creator campaign plan for a fictional shop: vetting table, brief, disclosure requirement, tracking codes and a results template.

Worked example

Worked example. Three micro-creators with local audiences each get a code: the code with the most redemptions shows which audience responds, and it informs the next brief.

Assignment with full solution

ASSIGNMENT

Creator vetting and brief

Business problem: A shop wants three creators for a launch.

Steps

1. Score five creators on audience fit, engagement and past sponsorships.
2. Pick three and write a brief with the message and disclosure.
3. Assign a unique code to each.
4. Compare redemptions after two weeks.

Expected output: A vetting table, the brief and the result template.

SOLUTION (ANSWER KEY)

Vetting uses the audience, not follower count alone. The unique codes make results traceable per creator.

Common mistakes

- Choosing creators by follower count only.
- Scripts that read like adverts.
- No disclosure.
- No tracking.

Freelancing opportunities

- Creator campaigns for local and e-commerce brands.
- Influencer briefs and results reports.
- Briefs for 'influencer marketing', 'creator partnership'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- FTC: disclosures for social media (US guidance, for reference)

Growth marketer

Profession 13 of 10 in Development and IT.

What the profession means

A growth marketer runs experiments across the whole customer journey, from acquisition to retention, to find repeatable ways to grow revenue.

What professionals do every day

Sets growth targets, runs experiments on channels, onboarding and retention, reads results weekly, and keeps the winners in the playbook.

Why businesses hire them, and what problems they solve

Businesses need compounding growth, not one-off campaigns. A growth marketer finds the levers that repeat.

- Growth that depends on one channel.
- Experiments with no decision rule.
- Retention ignored while acquisition grows.

Skills you need

- Growth models and funnels.
- Experiment design.
- Retention analysis (cohorts).
- Referral and loop design.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Analytics	Funnels and cohorts	Free	Paid 360 tier	analytics.google.com
Amplitude	Product analytics (verify plans)	Free tier	Paid plans	amplitude.com
Mixpanel	Event analytics (verify plans)	Free tier	Paid plans	mixpanel.com
Google Sheets	Experiment log	Free	Paid plans	sheets.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Build a cohort retention table for a sample dataset.
Intermediate	Run one onboarding experiment with a decision rule.
Advanced	Write a growth playbook page.

Projects by level

- **Beginner:** Growth plan for an app.
- **Intermediate:** Referral programme for a course.
- **Advanced:** Retention plan for a subscription box.

Client-ready portfolio project

A growth experiment plan for a fictional subscription service: funnel, three experiments with rules, a cohort retention table and a playbook entry.

Worked example

Worked example. A referral reward is tested for four weeks; referred users retain at 40% after 30 days against 30% for others. The reward is kept and added to the playbook with the numbers.

Assignment with full solution

ASSIGNMENT

Cohort retention and experiment decision

Business problem: A subscription service wants to know if a new onboarding step improves retention.

Steps

1. Build a cohort table: users by sign-up week and retention at week 4.
2. Run the new onboarding for one cohort group and the old for another.
3. Compare week-4 retention with a rule: keep the change if it improves by 5 points or more.
4. Write the decision.

Expected output: The cohort table, the rule and the decision.

SOLUTION (ANSWER KEY)

Cohorts show retention over time, which averages hide. The decision rule is fixed before the test. A small improvement may not justify the change; the rule makes that explicit.

Common mistakes

- Experiments without a control group.
- Measuring vanity metrics.
- Ignoring retention.
- Scaling one winner until it stops working.

Freelancing opportunities

- Growth audits and experiment programmes.
- Retention analysis for subscription and app businesses.

- Briefs for 'growth marketing', 'cohort analysis', 'referral programme'.

Learning resources

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 14

Local SEO consultant

Profession 14 of 10 in Development and IT.

What the profession means

A local SEO consultant helps local businesses appear in map results and nearby searches: business profiles, reviews, local content and consistent business details.

What professionals do every day

Claims and optimises business profiles, manages reviews and replies, checks citation consistency, builds local pages and reports on calls, directions and enquiries.

Why businesses hire them, and what problems they solve

Most local customers search on a phone for 'near me' services. A consultant makes the business findable at the moment of need.

- Missing or incorrect business profiles.
- Reviews left unanswered.
- Inconsistent name, address and phone across the web.

Skills you need

- Google Business Profile setup and rules.
- Review management.
- Local keywords and location pages.
- Citation consistency.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Business Profile	Map listing and insights	Free	Free	business.google.com
Google Search Console	Local search performance	Free	Free	search.google.com/search-console
Moz Local	Citation management (verify plans)	Trial	Paid plans	moz.com/local
BrightLocal	Local SEO tracking (verify plans)	Trial	Paid plans	www.brightlocal.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Complete one business profile with photos, hours and services.

Intermediate	Reply to five reviews with a consistent tone.
Advanced	Check name, address and phone on five directories.

Projects by level

- **Beginner:** Local clinic profile.
- **Intermediate:** Restaurant map listing.
- **Advanced:** Plumber service-area pages.

Client-ready portfolio project

A local SEO plan for a fictional bakery: profile checklist, review reply templates, citation list and a 60-day plan.

Worked example

Worked example. The bakery's name appears as 'Asha's Bakery' on the map and 'Asha Bakery' on a directory. The consultant standardises the name everywhere and records the change.

Assignment with full solution

ASSIGNMENT

Citation consistency check

Business problem: A bakery's details differ across the web.

Steps

1. List the official name, address and phone.
2. Check five directories and record every difference.
3. Correct each listing using the directory's own process.
4. Re-check after two weeks.

Expected output: A table of differences and fixes.

SOLUTION (ANSWER KEY)

One standard set of details is the reference. Every correction is recorded so the change can be explained later. The re-check confirms the directories updated.

Common mistakes

- Inconsistent details across listings.
- Fake or incentivised reviews.
- Keyword-stuffed business names.
- Ignoring the profile's questions and messages.

Freelancing opportunities

- Local SEO packages for clinics, restaurants and trades.
- Review management plans.
- Briefs for 'local SEO', 'Google Business Profile', 'map ranking'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Google Business Profile Help

DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 15

Marketing analyst

Profession 15 of 10 in Development and IT.

What the profession means

A marketing analyst measures what marketing does: tracks channels, builds dashboards, runs attribution analysis and explains the results to decision makers.

What professionals do every day

Collects data from ad platforms and analytics, cleans it, builds dashboards, runs comparisons and tests, and writes the monthly findings.

Why businesses hire them, and what problems they solve

Budget decisions need evidence. An analyst turns scattered channel data into a clear picture of what pays back.

- Channels measured in different ways.
- Dashboards nobody reads.
- Attribution claims that overstate one channel.

Skills you need

- Spreadsheet analysis and formulas.
- Analytics tools and tagging.
- Dashboards (Looker Studio, Power BI).
- Basic statistics for comparing results.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Looker Studio	Dashboards	Free	Free	lookerstudio.google.com
Google Sheets	Analysis and cost tables	Free	Paid plans	sheets.google.com
Google Analytics	Web analytics	Free	Paid 360 tier	analytics.google.com
Power BI	Dashboards (see Data department)	Free desktop	Paid plans	powerbi.microsoft.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Compute CAC and ROAS per channel from a sample table.
Intermediate	Build a one-page channel dashboard.

Advanced	Write three findings from the data.

Projects by level

- **Beginner:** Dashboard for a training firm.
- **Intermediate:** Channel report for an e-commerce shop.
- **Advanced:** Attribution comparison for a clinic.

Client-ready portfolio project

A monthly marketing report for a fictional firm: channel table with CAC and ROAS, a dashboard, three findings and three recommendations.

Worked example

Worked example. Search has the lowest cost per enquiry but the highest cost per sale; social has the reverse. The report recommends keeping both and testing a combined message.

PYTHON

```
from marketing_metrics import cac, roas
print(cac(40000, 50))   # 800.0 cost per enquiry for search
print(roas(90000, 40000))  # 2.25 revenue per rupee
```

Assignment with full solution

ASSIGNMENT

Channel comparison with findings

Business problem: A firm wants to know which channel to fund next quarter.

Steps

1. Build a table: spend, enquiries, sales, revenue for each channel.
2. Compute CAC and ROAS.
3. Write three findings with the numbers.
4. Recommend one budget change with its reason.

Expected output: The table, the three findings and the recommendation.

SOLUTION (ANSWER KEY)

Each finding cites a number from the table. The recommendation changes budget only where the numbers support it, and it names the measure that will show whether the change worked.

Common mistakes

- Comparing channels with different attribution windows.
- Reporting averages without the spread.
- Dashboards with no owner or update date.

- Presenting correlation as cause.

Freelancing opportunities

- Monthly reporting for marketing teams.
- Dashboard builds.
- Briefs for 'marketing analytics', 'Looker Studio dashboard', 'marketing report'.

Learning resources

LEARNING RESOURCES (VERIFY BEFORE USE)

- Google Skillshop (analytics and Looker Studio courses)
- Looker Studio Help
