CHAPTER 25

End-to-End Practical Capstone Projects

Twelve portfolio projects. Each must include the full deliverable checklist below, so the work reads like a real product case.

Build an E-commerce Product Strategy.

Define target shoppers, positioning, growth levers (search, recommendations, checkout) and a prioritised roadmap with metrics.

Define target shoppers, positioning, growth levers such as search, recommendations and checkout, and a prioritised roadmap with metrics for each lever.

Design a Fintech Payment Product.

Cover onboarding and KYC, payment flow, fraud and risk controls, compliance, reliability targets and merchant or consumer value.

Cover onboarding and KYC, the payment flow, fraud and risk controls, compliance requirements, reliability targets and the value to merchants and consumers.

Build a Product Analytics Dashboard.

Choose a north star and input metrics, define events, build funnel and retention views, and document how each metric drives a decision.

Choose a north star and input metrics, define events, build funnel and retention views, and document how each metric drives a decision.

Create a Customer Onboarding Optimisation Plan.

Map the activation journey, find drop-offs from data, propose experiments and set success targets.

Map the activation journey, find drop-offs from data, propose experiments and set success targets for each stage.

Develop an AI Customer Support Assistant.

Scope intents, knowledge sources, escalation to humans, quality and safety evaluation, and deflection and satisfaction metrics.

Scope the intents, knowledge sources and escalation to humans. Define quality and safety evaluation, and track deflection and satisfaction.

Design a RAG-Based Enterprise Knowledge Assistant.

Specify sources, permissions, chunking and retrieval design, citation behaviour, evaluation set and monitoring.

Specify sources, permissions, chunking and retrieval design, citation behaviour, the evaluation set and monitoring.

Build an AI Document Intelligence Product.

Extract and validate fields from documents, handle low-confidence cases with review, and measure accuracy and time saved.

Extract and validate fields from documents, route low-confidence cases to human review, and measure accuracy and time saved.

Design an AI Recommendation Engine.

Choose signals and approach, cold-start handling, diversity and fairness, offline and online evaluation, and business metrics.

Choose the signals and approach, handle cold start for new users and items, ensure diversity and fairness, and define offline and online evaluation with business metrics.

Create an AI Customer Complaint Management System.

Classify, route and summarise complaints, set priorities and SLAs, include human review and compliance tracking.

Classify, route and summarise complaints, set priorities and service-level targets, and include human review and compliance tracking.

Build a Multi-Agent Business Automation Workflow.

Define agent roles, tools, permissions, hand-offs, approval points, failure handling and cost limits.

Define agent roles, tools, permissions, hand-offs, approval points, failure handling and cost limits.

Develop an AI Sales Assistant.

Support prospecting, call preparation and follow-up with CRM grounding, guardrails and pipeline-impact metrics.

Support prospecting, call preparation and follow-up with CRM grounding and guardrails. Track pipeline impact, not just usage.

Create an AI-Powered Product Analytics Assistant.

Let users ask data questions in natural language with safe SQL generation, verification and clear lineage of answers.

Let users ask data questions in plain language, generate safe queries, verify results and show where each answer came from.

Summary of terms

Term	Meaning
Build an E-commerce Product Strategy.	Define target shoppers, positioning, growth levers (search, recommendations, checkout) and a prioritised roadmap with metrics.
Design a Fintech Payment Product.	Cover onboarding and KYC, payment flow, fraud and risk controls, compliance, reliability targets and merchant or consumer value.

Build a Product Analytics Dashboard.	Choose a north star and input metrics, define events, build funnel and retention views, and document how each metric drives a decision.
Create a Customer Onboarding Optimisation Plan.	Map the activation journey, find drop-offs from data, propose experiments and set success targets.
Develop an AI Customer Support Assistant.	Scope intents, knowledge sources, escalation to humans, quality and safety evaluation, and deflection and satisfaction metrics.
Design a RAG-Based Enterprise Knowledge Assistant.	Specify sources, permissions, chunking and retrieval design, citation behaviour, evaluation set and monitoring.
Build an AI Document Intelligence Product.	Extract and validate fields from documents, handle low-confidence cases with review, and measure accuracy and time saved.
Design an AI Recommendation Engine.	Choose signals and approach, cold-start handling, diversity and fairness, offline and online evaluation, and business metrics.
Create an AI Customer Complaint Management System.	Classify, route and summarise complaints, set priorities and SLAs, include human review and compliance tracking.
Build a Multi-Agent Business Automation Workflow.	Define agent roles, tools, permissions, hand-offs, approval points, failure handling and cost limits.
Develop an AI Sales Assistant.	Support prospecting, call preparation and follow-up with CRM grounding, guardrails and pipeline-impact metrics.
Create an AI-Powered Product Analytics Assistant.	Let users ask data questions in natural language with safe SQL generation, verification and clear lineage of answers.

Practice exercise: Pick one capstone and complete every item of the deliverable checklist. Present it in ten minutes.

Self-check

1. Explain Build an E-commerce Product Strategy. in two sentences to a non-technical stakeholder, then say what you would measure for it.
2. Explain Build an AI Document Intelligence Product. in two sentences to a non-technical stakeholder, then say what you would measure for it.
3. Explain Create an AI-Powered Product Analytics Assistant. in two sentences to a non-technical stakeholder, then say what you would measure for it.

Context window

Context window: what a model can see at once

The context window is the most tokens a model can consider in one request. It covers your prompt, any documents you paste, the conversation so far and the reply. Anything outside it is invisible to the model. For PMs: a longer window fits more material but costs more and can slow responses; put the most important facts near the instructions; use retrieval (RAG) rather than pasting whole libraries; and test answers on long inputs, where quality can drop.

PM frameworks cheat sheet

Framework	Use it to	How it works
RICE	Prioritise a backlog	Reach × Impact × Confidence ÷ Effort. Score each idea, then sanity-check the ranking.
Kano	Decide which features delight	Classify features as Must-be, Performance, Attractive, Indifferent or Reverse using a short survey.
MoSCoW	Scope a release	Must have, Should have, Could have, Won't have (this time).
Jobs-to-be-done	Understand motivation	When [situation], I want to [motivation], so I can [outcome].
AARRR (Pirate metrics)	Map the growth funnel	Acquisition, Activation, Retention, Referral, Revenue.
HEART	Measure user experience	Happiness, Engagement, Adoption, Retention, Task success, each with goals, signals and metrics.
North Star metric	Align the team	One metric that captures the value users get, supported by input metrics the team can move.
Five whys	Find the root cause	Ask 'why?' repeatedly until you reach a cause you can act on.
CIRCLES	Answer product design questions	Comprehend, Identify users, Report needs, Cut through prioritisation, List solutions, Evaluate trade-offs, Summarise.

PRD template

PRD: [Feature name] Owner: [Name] · Status: Draft · Last updated: [Date] 1. Problem Who has the problem, what it is, and the evidence (data, interviews, tickets). 2. Goal and success metrics Primary metric (with baseline and target), secondary metrics, guardrails. 3. Users and use cases Target segment, top 3 user stories: "As a [user], I want [action] so that [benefit]." 4. Solution What we'll build (link designs), what's out of scope, open questions. 5. AI behaviour (if applicable) Inputs, model, prompt/approach, what it must never do, human review, evaluation set and pass criteria, cost per request. 6. Launch plan Experiment design, rollout stages, support and comms, rollback criteria. 7. Risks and dependencies Technical, legal/privacy, operational; owners and mitigations.
