AI PRODUCT MANAGEMENT 2 · DETAILED COURSE

Interview Preparation and Career Readiness

Preparing for traditional PM and AI PM interviews, with practice, portfolio and skill-gap work. The full question bank is in the Interview guide on this site.

Chapter 26 of 26 · 22 topics · Edition 2026 · skillnavora.in

CHAPTER 26

Interview Preparation and Career Readiness

Preparing for traditional PM and AI PM interviews, with practice, portfolio and skill-gap work. The full question bank is in the Interview guide on this site.

Product Management Interview Fundamentals

Know the loop: screens, product sense, execution, analytics, technical, strategy and behavioural rounds.

Know the typical loop: screening, product sense, execution, analytics, technical, strategy and behavioural rounds. Prepare a story bank that covers each.

Associate Product Manager Interviews

Emphasise structured thinking, curiosity, user empathy and learning ability over experience.

Emphasise structured thinking, curiosity, user empathy and learning ability over experience. Show how you learned from a project.

Product Manager Interviews

Show end-to-end ownership, prioritisation, metrics and influence with examples.

Show end-to-end ownership, prioritisation, metrics and influence with examples and numbers.

Product Owner Interviews

Show backlog management, story writing, Scrum fluency and stakeholder handling.

Show backlog management, story writing, Scrum fluency and stakeholder handling.

Product Analyst Interviews

Expect SQL, metrics definition, experiment analysis and data storytelling.

Expect SQL, metric definition, experiment analysis and data storytelling. Practise explaining a result to a non-technical audience.

AI Product Manager Interviews

Expect AI fundamentals, evaluation, cost and risk trade-offs, and product sense for AI features.

Expect AI fundamentals, evaluation, cost and risk trade-offs, and product sense for AI features. Use the interview guide on this site to practise.

Product Sense Interviews

Structure: user, problem, solutions, prioritise, metrics.

Use a clear structure: the user, the problem, possible solutions, prioritisation and metrics.

Product Design Interviews

Design a product for a user group, with flows, trade-offs and validation.

Design a product for a user group, covering flows, trade-offs and validation with users.

Product Strategy Interviews

Market analysis, positioning, moats, and a recommendation with risks.

Cover market analysis, positioning, competitive moats and a recommendation with its risks.

Technical Product Interviews

Explain systems, APIs and trade-offs clearly and discuss feasibility.

Explain systems, APIs and trade-offs clearly and discuss feasibility with an engineer.

AI/ML Technical Interviews

Explain model types, metrics, LLM concepts, prompting, RAG and fine-tuning choices.

Explain model types, metrics, LLM concepts, prompting, retrieval and when to fine-tune.

RAG and Agentic AI Interviews

Design a RAG or agent system, discuss evaluation, failure modes, permissions and cost.

Design a retrieval or agent system and discuss evaluation, failure modes, permissions and cost.

Product Analytics Interviews

Define metrics, diagnose a drop, design an experiment and read a funnel.

Define metrics, diagnose a sudden drop, design an experiment and read a funnel.

Product Case Studies

Practise end-to-end cases from problem framing to rollout and measurement.

Practise end-to-end cases from problem framing through rollout and measurement. Time yourself and state assumptions aloud.

Business Case Interviews

Estimate market size, profitability and ROI with clear assumptions.

Estimate market size, profitability and return on investment with clear assumptions and sensitivity checks.

Behavioural Interviews

Prepare STAR stories on conflict, failure, influence and leadership, each with a number.

Prepare STAR stories (situation, task, action, result) on conflict, failure, influence and leadership, each with a measurable result.

Stakeholder Management Interviews

Show how you handle disagreement, ambiguity and competing priorities.

Show how you handle disagreement, ambiguity and competing priorities, with a specific example.

Product Execution Interviews

Show how you plan launches, handle risks and debug a metric drop.

Show how you plan launches, manage risks and diagnose a metric drop.

Product Leadership Interviews

Show vision, team building, strategy and organisational influence.

Show vision, team building, strategy and organisational influence, with examples at the right scope.

Resume and Portfolio Development

Quantified outcomes, clear scope, and 2-3 capstone case studies with artefacts.

Write quantified outcomes and clear scope. Build two or three case studies from your capstone projects with artefacts.

Mock Interviews

Timed practice with feedback on structure, clarity and depth, recorded where possible.

Practise under time limits with feedback on structure, clarity and depth. Record the session and review it.

Job Description-Based Skill Gap Analysis

Compare a target job's requirements with your skills and build a learning plan; see the industry research page for skill frequencies.

Compare a target job's requirements with your skills and build a learning plan. The industry research page shows which skills employers name most often.

Summary of terms

Term	Meaning
Product Management Interview Fundamentals	Know the loop: screens, product sense, execution, analytics, technical, strategy and behavioural rounds.
Associate Product Manager Interviews	Emphasise structured thinking, curiosity, user empathy and learning ability over experience.
Product Manager Interviews	Show end-to-end ownership, prioritisation, metrics and influence with examples.
Product Owner Interviews	Show backlog management, story writing, Scrum fluency and stakeholder handling.
Product Analyst Interviews	Expect SQL, metrics definition, experiment analysis and data storytelling.

AI Product Manager Interviews	Expect AI fundamentals, evaluation, cost and risk trade-offs, and product sense for AI features.
Product Sense Interviews	Structure: user, problem, solutions, prioritise, metrics.
Product Design Interviews	Design a product for a user group, with flows, trade-offs and validation.
Product Strategy Interviews	Market analysis, positioning, moats, and a recommendation with risks.
Technical Product Interviews	Explain systems, APIs and trade-offs clearly and discuss feasibility.
AI/ML Technical Interviews	Explain model types, metrics, LLM concepts, prompting, RAG and fine-tuning choices.
RAG and Agentic AI Interviews	Design a RAG or agent system, discuss evaluation, failure modes, permissions and cost.
Product Analytics Interviews	Define metrics, diagnose a drop, design an experiment and read a funnel.
Product Case Studies	Practise end-to-end cases from problem framing to rollout and measurement.
Business Case Interviews	Estimate market size, profitability and ROI with clear assumptions.
Behavioural Interviews	Prepare STAR stories on conflict, failure, influence and leadership, each with a number.
Stakeholder Management Interviews	Show how you handle disagreement, ambiguity and competing priorities.
Product Execution Interviews	Show how you plan launches, handle risks and debug a metric drop.
Product Leadership Interviews	Show vision, team building, strategy and organisational influence.
Resume and Portfolio Development	Quantified outcomes, clear scope, and 2-3 capstone case studies with artefacts.
Mock Interviews	Timed practice with feedback on structure, clarity and depth, recorded where possible.
Job Description-Based Skill Gap Analysis	Compare a target job's requirements with your skills and build a learning plan; see the industry research page for skill frequencies.

Practice exercise: Take a real job description, extract the required skills, mark your gaps, and run two timed mock interviews on the weakest ones.

Self-check

1. Explain Product Management Interview Fundamentals in two sentences to a non-technical stakeholder, then say what you would measure for it.
2. Explain RAG and Agentic AI Interviews in two sentences to a non-technical stakeholder, then say what you would measure for it.
3. Explain Job Description-Based Skill Gap Analysis in two sentences to a non-technical stakeholder, then say what you would measure for it.

Context window

Context window: what a model can see at once

The context window is the most tokens a model can consider in one request. It covers your prompt, any documents you paste, the conversation so far and the reply. Anything outside it is invisible to the model. For PMs: a longer window fits more material but costs more and can slow responses; put the most important facts near the instructions; use retrieval (RAG) rather than pasting whole libraries; and test answers on long inputs, where quality can drop.

Hand-picked public question banks and guides from other PM communities. Each link opens the original page in a new tab.

PM frameworks cheat sheet

Framework	Use it to	How it works
RICE	Prioritise a backlog	Reach × Impact × Confidence ÷ Effort. Score each idea, then sanity-check the ranking.
Kano	Decide which features delight	Classify features as Must-be, Performance, Attractive, Indifferent or Reverse using a short survey.
MoSCoW	Scope a release	Must have, Should have, Could have, Won't have (this time).
Jobs-to-be-done	Understand motivation	When [situation], I want to [motivation], so I can [outcome].
AARRR (Pirate metrics)	Map the growth funnel	Acquisition, Activation, Retention, Referral, Revenue.
HEART	Measure user experience	Happiness, Engagement, Adoption, Retention, Task success, each with goals, signals and metrics.
North Star metric	Align the team	One metric that captures the value users get, supported by input metrics the team can move.
Five whys	Find the root cause	Ask 'why?' repeatedly until you reach a cause you can act on.
CIRCLES	Answer product design questions	Comprehend, Identify users, Report needs, Cut through prioritisation, List solutions, Evaluate trade-offs, Summarise.

PRD template

PRD: [Feature name] Owner: [Name] · Status: Draft · Last updated: [Date] 1. Problem Who has the problem, what it is, and the evidence (data, interviews, tickets). 2. Goal and success metrics Primary metric (with baseline and target), secondary metrics, guardrails. 3. Users and use cases Target segment, top 3 user stories: "As a [user], I want [action] so that [benefit]." 4. Solution What we'll build (link designs), what's out of scope, open questions. 5. AI behaviour (if applicable) Inputs, model, prompt/approach, what it must never do, human review, evaluation set and pass criteria, cost per request. 6. Launch plan Experiment design, rollout stages, support and comms, rollback criteria. 7. Risks and dependencies Technical, legal/privacy, operational; owners and mitigations.
