AI PRODUCT MANAGEMENT 2 · DETAILED COURSE

Product Management Specialisations

How the PM role changes by product type, and what each specialisation emphasises.

Chapter 23 of 26 · 16 topics · Edition 2026 · skillnavora.in

CHAPTER 23

Product Management Specialisations

How the PM role changes by product type, and what each specialisation emphasises.

Technical Product Management

Products where technical depth matters: infrastructure, developer tools, APIs and data platforms.

Products where technical depth matters, such as infrastructure, developer tools, APIs and data platforms. The PM must discuss architecture trade-offs and developer experience credibly.

Growth Product Management

Owning acquisition, activation, retention and revenue through experiments.

Owns acquisition, activation, retention and revenue through experiments. Growth PMs work from funnels and cohorts and ship many small tests.

Platform Product Management

Building shared capabilities that other teams or partners build on, with internal or external customers.

Builds shared capabilities that other teams or partners build on. Success means other teams adopt the platform without friction.

B2B Product Management

Selling to organisations: multiple stakeholders, integrations, security and long cycles.

Selling to organisations involves several stakeholders, integrations, security reviews and long cycles. Success depends on admin controls, reporting and reliability.

B2C Product Management

Consumer products: scale, delight, habits and rapid experimentation.

Consumer products depend on scale, delight, habit formation and rapid experiments. Retention and daily use are central metrics.

SaaS Product Management

Subscription software: onboarding, retention, expansion and continuous delivery.

Subscription software needs strong onboarding, retention, expansion and continuous delivery. Pricing and packaging are ongoing product decisions.

Fintech Product Management

Financial products with regulation, risk, fraud, reliability and trust at the centre.

Financial products have regulation, risk, fraud, reliability and trust at the centre. Compliance and security requirements shape the roadmap.

Banking Product Management

Retail, corporate and payments products inside regulated institutions with legacy integration.

Retail, corporate and payments products inside regulated institutions, often with legacy system integration. Change moves slowly, so plan releases carefully.

E-commerce Product Management

Catalogue, search, checkout, fulfilment and conversion.

Catalogue, search, checkout, fulfilment and conversion. Small improvements in checkout speed can have large revenue effects.

Marketplace Product Management

Balancing supply and demand, trust and safety, pricing and liquidity.

Balances supply and demand, trust and safety, pricing and liquidity. A marketplace fails when one side leaves, so watch both sides' metrics.

API Product Management

Treating an API as a product: developer experience, documentation, versioning and pricing.

Treats an API as a product: developer experience, documentation, versioning and pricing. Breaking changes damage trust quickly.

Data Product Management

Managing data assets and analytics products with quality, access and usability for consumers.

Manages data assets and analytics products with quality, access and usability for consumers. Data products are judged by whether people trust and use them.

AI Product Management

Managing products whose core value comes from machine learning, with uncertainty, evaluation and data in scope.

Products whose core value comes from machine learning, with uncertainty, evaluation and data in scope. The PM must define quality in measurable terms.

Generative AI Product Management

Products built on foundation models: prompts, retrieval, evaluation, cost and safety.

Products built on foundation models: prompts, retrieval, evaluation, cost and safety. Output quality varies, so the PM manages it continuously.

Agentic AI Product Management

Products where agents act on a user's behalf: autonomy, permissions, reliability and oversight.

Products where agents act on a user's behalf: autonomy, permissions, reliability and human oversight. The main questions are what the agent may do and how it is stopped.

Enterprise AI Product Management

AI for organisations: integration, governance, security, adoption and measurable ROI.

AI for organisations: integration, governance, security, adoption and measurable return on investment. Enterprise buyers ask for audit logs, data controls and proof of value.

Summary of terms

Term	Meaning
Technical Product Management	Products where technical depth matters: infrastructure, developer tools, APIs and data platforms.
Growth Product Management	Owning acquisition, activation, retention and revenue through experiments.
Platform Product Management	Building shared capabilities that other teams or partners build on, with internal or external customers.
B2B Product Management	Selling to organisations: multiple stakeholders, integrations, security and long cycles.
B2C Product Management	Consumer products: scale, delight, habits and rapid experimentation.
SaaS Product Management	Subscription software: onboarding, retention, expansion and continuous delivery.
Fintech Product Management	Financial products with regulation, risk, fraud, reliability and trust at the centre.
Banking Product Management	Retail, corporate and payments products inside regulated institutions with legacy integration.
E-commerce Product Management	Catalogue, search, checkout, fulfilment and conversion.
Marketplace Product Management	Balancing supply and demand, trust and safety, pricing and liquidity.
API Product Management	Treating an API as a product: developer experience, documentation, versioning and pricing.
Data Product Management	Managing data assets and analytics products with quality, access and usability for consumers.
AI Product Management	Managing products whose core value comes from machine learning, with uncertainty, evaluation and data in scope.
Generative AI Product Management	Products built on foundation models: prompts, retrieval, evaluation, cost and safety.
Agentic AI Product Management	Products where agents act on a user's behalf: autonomy, permissions, reliability and oversight.
Enterprise AI Product Management	AI for organisations: integration, governance, security, adoption and measurable ROI.

Practice exercise: Choose the specialisation you are targeting. List the five skills it weights most and your current gap on each.

Self-check

1. Explain Technical Product Management in two sentences to a non-technical stakeholder, then say what you would measure for it.
2. Explain E-commerce Product Management in two sentences to a non-technical stakeholder, then say what you would measure for it.
3. Explain Enterprise AI Product Management in two sentences to a non-technical stakeholder, then say what you would measure for it.

Context window

Context window: what a model can see at once

The context window is the most tokens a model can consider in one request. It covers your prompt, any documents you paste, the conversation so far and the reply. Anything outside it is invisible to the model. For PMs: a longer window fits more material but costs more and can slow responses; put the most important facts near the instructions; use retrieval (RAG) rather than pasting whole libraries; and test answers on long inputs, where quality can drop.

PM frameworks cheat sheet

Framework	Use it to	How it works
RICE	Prioritise a backlog	Reach × Impact × Confidence ÷ Effort. Score each idea, then sanity-check the ranking.
Kano	Decide which features delight	Classify features as Must-be, Performance, Attractive, Indifferent or Reverse using a short survey.
MoSCoW	Scope a release	Must have, Should have, Could have, Won't have (this time).
Jobs-to-be-done	Understand motivation	When [situation], I want to [motivation], so I can [outcome].
AARRR (Pirate metrics)	Map the growth funnel	Acquisition, Activation, Retention, Referral, Revenue.
HEART	Measure user experience	Happiness, Engagement, Adoption, Retention, Task success, each with goals, signals and metrics.
North Star metric	Align the team	One metric that captures the value users get, supported by input metrics the team can move.
Five whys	Find the root cause	Ask 'why?' repeatedly until you reach a cause you can act on.
CIRCLES	Answer product design questions	Comprehend, Identify users, Report needs, Cut through prioritisation, List solutions, Evaluate trade-offs, Summarise.

PRD template

PRD: [Feature name] Owner: [Name] · Status: Draft · Last updated: [Date] 1. Problem Who has the problem, what it is, and the evidence (data, interviews, tickets). 2. Goal and success metrics Primary metric (with baseline and target), secondary metrics, guardrails. 3. Users and use cases Target segment, top 3 user stories: "As a [user], I want [action] so that [benefit]." 4. Solution What we'll build (link designs), what's out of scope, open questions. 5. AI behaviour (if applicable) Inputs, model, prompt/approach, what it must never do, human review, evaluation set and pass criteria, cost per request. 6. Launch plan Experiment design, rollout stages, support and comms, rollback criteria. 7. Risks and dependencies Technical, legal/privacy, operational; owners and mitigations.
