START HERE

How to use this guide

A practical digital marketing guide: twelve modules, each with key ideas, steps, a practice task with a model answer, three check-yourself questions and official resources. Work through the modules in order, or jump to the one you need.

How each module works

1. Read the why and the key ideas.
2. Follow the steps on a real or practice business.
3. Do the practice task, then compare with the model answer.
4. Answer the check questions; the answers are given under each one.
5. Follow the official links for the current features and rules.

Worked numbers

Every calculation in this guide uses the same formulas: CTR, CPC, conversion rate, CPA, ROAS, break-even ROAS, LTV, CAC, and the UTM link and A/B test calculations in the tested code below.

PYTHON

```
import math
from urllib.parse import urlencode, urlsplit, urlunsplit

def ctr(clicks, impressions): return round(100 * clicks / impressions, 2) if impressions else 0.0
def cpc(cost, clicks): return round(cost / clicks, 2) if clicks else 0.0
def conversion_rate(conversions, clicks): return round(100 * conversions / clicks, 2) if clicks
else 0.0
def cpa(cost, conversions): return round(cost / conversions, 2) if conversions else 0.0
def roas(revenue, cost): return round(revenue / cost, 2) if cost else 0.0
def roi_pct(revenue, cost): return round(100 * (revenue - cost) / cost, 1) if cost else 0.0
def break_even_roas(margin_pct): return round(100 / margin_pct, 2)
def ltv(avg_order, orders_per_year, years, margin_pct): return round(avg_order * orders_per_year *
years * margin_pct / 100, 2)
def cac_payback_months(cac, monthly_margin_per_customer): return round(cac /
monthly_margin_per_customer, 1)

def utm_url(url, source, medium, campaign, term=None, content=None):
    """Lower-case, hyphenated UTM values keep reports clean."""
    clean = lambda s: s.strip().lower().replace(" ", "-")
    q = {"utm_source": clean(source), "utm_medium": clean(medium), "utm_campaign":
clean(campaign)}
    if term: q["utm_term"] = clean(term)
    if content: q["utm_content"] = clean(content)
    p = urlsplit(url)
    sep = (p.query + "&" if p.query else "") + urlencode(q)
    return urlunsplit((p.scheme, p.netloc, p.path, sep, p.fragment))

def ab_test(conv_a, n_a, conv_b, n_b):
    """Two-proportion z-test (two-sided). Returns rates, z and p-value."""
    pa, pb = conv_a / n_a, conv_b / n_b
    pool = (conv_a + conv_b) / (n_a + n_b)
    se = math.sqrt(pool * (1 - pool) * (1 / n_a + 1 / n_b))
    z = (pb - pa) / se
    p = 2 * (1 - 0.5 * (1 + math.erf(abs(z) / math.sqrt(2))))
    return {"rate_a_pct": round(100 * pa, 2), "rate_b_pct": round(100 * pb, 2), "z": round(z, 2),
"p_value": round(p, 4)}
```

```
assert ctr(200,10000)==2.0 and roas(20000,5000)==4.0 and break_even_roas(40)==2.5
print('digital marketing tests passed')
```

VERIFICATION NOTE

Platform features, ad policies, prices and privacy rules change often. Official links were not checked live from this workspace. Confirm each one on the official site. This guide is for learning and is not legal, tax or financial advice.

MODULE 1

How digital marketing works

Every channel makes more sense once you see the whole path a customer takes from first hearing about you to buying again.

Why it matters

Every channel makes more sense once you see the whole path a customer takes from first hearing about you to buying again.

Key ideas

- **The funnel.** Awareness (they find out you exist), consideration (they compare), conversion (they act), retention (they come back) and advocacy (they recommend). Each stage needs different content and a different measure.
- **Owned, earned and paid media.** Owned is what you control (website, email list). Earned is attention others give you (reviews, shares, press). Paid is attention you buy (ads). A healthy mix uses all three.
- **Goals and KPIs.** A goal is the result you want (more bookings). A KPI is the number that tracks it (booking requests per week). Set one main KPI per campaign.
- **SMART goals.** Specific, measurable, achievable, relevant and time-bound: 'Raise demo requests from 20 to 35 a month within 90 days.'
- **Channels vs tactics.** A channel is where (search, social, email). A tactic is what you do there (a retargeting ad, a welcome email). Choose channels by where your customers already are.

Steps to follow

1. Write one sentence describing your customer and what they want.
2. Map the funnel: list one thing you do today at each stage.
3. Pick one main KPI for the next 90 days and write it as a SMART goal.

ASSIGNMENT

Practice

Business problem: A tutoring centre wants more trial-class bookings. Write one SMART goal and name the KPI.

Steps

1. Write one sentence describing your customer and what they want.
2. Map the funnel: list one thing you do today at each stage.
3. Pick one main KPI for the next 90 days and write it as a SMART goal.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Goal: raise trial-class bookings from 15 to 25 per month within 90 days. KPI: trial bookings per month. Supporting numbers: website visits, booking-form conversion rate.

Check yourself

1. **Which is an example of earned media?**
   A. A Google ad
   B. A customer review that others read
   C. Your email newsletter
   D. A paid influencer post

   Answer: A customer review that others read. Earned media is attention you do not buy or control, such as reviews and shares.

2. **What makes a goal SMART?**
   A. It is short
   B. It is specific, measurable and has a deadline
   C. It uses a famous tool
   D. It is set by the manager

   Answer: It is specific, measurable and has a deadline. SMART goals are specific, measurable, achievable, relevant and time-bound.

3. **Which stage comes right after consideration?**
   A. Awareness
   B. Conversion
   C. Advocacy
   D. Retention

   Answer: Conversion. After comparing options (consideration) the customer acts (conversion).

MODULE 2

Know your customer

Marketing that speaks to everyone persuades no one. Research tells you who to talk to and what to say.

Why it matters

Marketing that speaks to everyone persuades no one. Research tells you who to talk to and what to say.

Key ideas

- **Persona.** A short, research-based description of a typical customer: goals, problems, where they look for help. Base it on real conversations, not guesses.
- **Jobs to be done.** People 'hire' a product to make progress: 'help me prepare for an exam in 30 days'. Describing the job shows what you really compete with.
- **Research methods.** Interviews give depth, surveys give numbers, search data shows what people ask, and reviews of competitors show unmet needs.
- **Value proposition.** One clear sentence: who it is for, what it does and why it is better. Test it on real customers.
- **Messaging.** Lead with the customer's problem and result, not your features. Use their words from interviews and reviews.

Steps to follow

1. Interview five customers for 20 minutes each; ask what happened before they bought.
2. List the top three problems and the exact words they used.
3. Write a value proposition and read it to two customers.

ASSIGNMENT

Practice

Business problem: Write a value proposition for a bookkeeping service for small shops.

Steps

1. Interview five customers for 20 minutes each; ask what happened before they bought.
2. List the top three problems and the exact words they used.
3. Write a value proposition and read it to two customers.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

For small shop owners who dread month-end: we close your books by the 5th every month at a fixed price, so you know your numbers without learning accounting. (Check each claim is true before using it.)

Check yourself

1. **Where should a persona come from?**
   A. Imagination
   B. Real customer research
   C. The founder's taste
   D. A competitor's logo

   Answer: Real customer research. Personas are useful only when they come from real research.

2. **Which method gives the deepest understanding?**
   A. A one-question poll
   B. Customer interviews
   C. Counting followers
   D. Guessing

   Answer: Customer interviews. Interviews reveal reasons and context that numbers cannot.

3. **Good messaging usually starts with...**
   A. Your company history
   B. The customer's problem and result
   C. A list of features
   D. A discount

   Answer: The customer's problem and result. Customers care first about their problem and the result they want.

MODULE 3

Your website and landing pages

Most paid and organic channels send people to a page. If the page is slow or unclear, every other effort is wasted.

Why it matters

Most paid and organic channels send people to a page. If the page is slow or unclear, every other effort is wasted.

Key ideas

- **One page, one goal.** A landing page has one job (a sign-up, a call, a purchase). Remove links and clutter that lead away from it.
- **Above the fold.** The first screen should state what you offer, for whom, and show one clear action button.
- **Speed and mobile.** Most visits are on phones. Compress images, avoid heavy scripts and test on a real phone.
- **Trust.** Real testimonials, clear pricing, contact details, policies and secure forms reduce hesitation.
- **Forms.** Ask only what you need. Each extra field lowers the share of people who finish.
- **Accessibility.** Readable contrast, labelled form fields and keyboard use help everyone and reduce lost customers.

Steps to follow

1. Open your page on a phone and note what you see in the first five seconds.
2. Check speed with PageSpeed Insights and fix the largest image first.
3. Reduce the form to the minimum fields.

ASSIGNMENT

Practice

Business problem: A landing page has seven form fields and a 2% conversion rate. What is the first test to run?

Steps

1. Open your page on a phone and note what you see in the first five seconds.
2. Check speed with PageSpeed Insights and fix the largest image first.
3. Reduce the form to the minimum fields.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Cut the form to the fields you really need (for example name and phone) and compare the conversion rate against the old form with an A/B test.

Check yourself

1. **What is the main rule of a landing page?**
   A. Add many links
   B. One page, one goal
   C. Use long paragraphs
   D. Hide the price

   Answer: One page, one goal. A single clear goal keeps visitors focused.

2. **Which change usually helps form completion?**
   A. More fields
   B. Fewer fields
   C. Smaller text
   D. No button

   Answer: Fewer fields. Each extra field lowers completion.

3. **Why test on a real phone?**
   A. Phones are fashionable
   B. Most visits are on phones
   C. It is required by law
   D. It is cheaper

   Answer: Most visits are on phones. Most traffic is mobile, so check the real experience.

Learn more (official sources)

- PageSpeed Insights (official site, not checked live)

MODULE 4

Search engine optimisation (SEO)

People ask search engines for help every day. SEO earns steady, unpaid visits, though no one can guarantee rankings.

Why it matters

People ask search engines for help every day. SEO earns steady, unpaid visits, though no one can guarantee rankings.

Key ideas

- **How search works.** Crawlers find pages, the search engine stores (indexes) them, and ranks results for each query by relevance and quality.
- **Search intent.** Informational (learn), commercial (compare), transactional (buy), navigational (find a site). Match the page to the intent.
- **On-page SEO.** A clear title and description, one H1, descriptive headings, useful content, descriptive image text and internal links.
- **Technical SEO.** Pages must be crawlable, fast, mobile-friendly and secure (HTTPS). Submit a sitemap and fix broken links.
- **Links.** Links from trusted, relevant sites signal value. Earn them with useful content; do not buy them.
- **Local SEO.** A complete business profile, consistent name, address and phone, and genuine reviews help local searches.

Steps to follow

1. Search the ten questions your customers ask and list the top results.
2. Write one page that answers one question better than the results.
3. Add the site to Google Search Console and submit the sitemap.

ASSIGNMENT

Practice

Business problem: A shop wants to rank for 'how to choose a ceiling fan'. Name the intent and two on-page changes.

Steps

1. Search the ten questions your customers ask and list the top results.
2. Write one page that answers one question better than the results.
3. Add the site to Google Search Console and submit the sitemap.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Intent: informational. Changes: use a title that includes the question, structure the page with headings for each factor (size, speed, noise) and add a short comparison table.

Check yourself

1. **Which is a transactional search?**
   A. what is a ceiling fan
   B. buy ceiling fan online
   C. history of fans
   D. fan blade physics

   Answer: buy ceiling fan online. A transactional query shows readiness to buy.

2. **Can an SEO provider guarantee first place?**
   A. Yes, always
   B. No, rankings cannot be guaranteed
   C. Only with ads
   D. Only in India

   Answer: No, rankings cannot be guaranteed. Search engines decide rankings, so guarantees are a warning sign.

3. **What does a sitemap help with?**
   A. Page colour
   B. Helping search engines find pages
   C. Faster typing
   D. Email delivery

   Answer: Helping search engines find pages. A sitemap lists pages for crawlers to find.

Learn more (official sources)

- Google Search Central (official site, not checked live)
- Google Search Console (official site, not checked live)

MODULE 5

Content marketing

Useful content builds trust before a sale and gives every channel something worth sharing.

Why it matters

Useful content builds trust before a sale and gives every channel something worth sharing.

Key ideas

- **Content strategy.** Decide who it is for, which problems it solves, which formats suit them and how it leads to your offer.
- **Formats.** Articles, videos, short clips, checklists, templates, podcasts, case studies and webinars. Pick two you can make well.
- **Editorial calendar.** A plan of topics, formats, owners and dates, with room for news.
- **Repurposing.** Turn one idea into many pieces: an article becomes a checklist, three short posts and a short video.
- **Distribution.** Great content needs a plan to reach people: your email list, social channels, search and partners.
- **Measuring.** Track reach, engagement and the action you wanted (sign-ups, enquiries), not only views.

Steps to follow

1. List ten questions customers ask and turn each into a title.
2. Make a four-week calendar with one main piece per week.
3. Repurpose one piece into three smaller ones.

ASSIGNMENT

Practice

Business problem: Turn the topic 'late invoices' into four pieces of content from one article.

Steps

1. List ten questions customers ask and turn each into a title.
2. Make a four-week calendar with one main piece per week.
3. Repurpose one piece into three smaller ones.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Article: 'Five reasons invoices are paid late'. Pieces: a checklist download, three short social posts, a one-minute video, an email to subscribers.

Check yourself

1. **What does repurposing mean?**
   A. Deleting old content
   B. Reusing one idea in several formats
   C. Buying content
   D. Copying a competitor

   Answer: Reusing one idea in several formats. One idea can feed many formats.

2. **Why plan distribution?**
   A. Content spreads by itself
   B. Good content still needs a path to its readers
   C. It is optional
   D. It is illegal otherwise

   Answer: Good content still needs a path to its readers. Without distribution, even good content stays unseen.

3. **Which measure shows real impact?**
   A. Views only
   B. Actions such as sign-ups
   C. Word count
   D. Font size

   Answer: Actions such as sign-ups. Actions connect content to business results.

Learn more (official sources)

- HubSpot content marketing course (official site, not checked live)

MODULE 6

Social media marketing

Social platforms are where many customers spend time. Consistent, useful posts build an audience you can talk to.

Why it matters

Social platforms are where many customers spend time. Consistent, useful posts build an audience you can talk to.

Key ideas

- **Platform choice.** Choose two or three platforms where your customers already are. Doing a few well beats doing many poorly.
- **Content pillars.** Three to five themes you post about (for example tips, behind the scenes, customer stories, offers).
- **Cadence.** A schedule you can keep. Consistency beats bursts.
- **Community management.** Reply quickly, thank people, handle complaints in public with a plan and move sensitive issues to private messages.
- **Organic and paid.** Organic builds relationships; paid reaches new audiences quickly. Test posts organically before boosting.
- **Influencers and disclosure.** Partner with creators whose audience fits yours, agree deliverables in writing and make sure paid partnerships are clearly disclosed as the rules of each platform and your country require.

Steps to follow

1. Pick two platforms and write your three content pillars.
2. Plan two weeks of posts, one per pillar.
3. Set a daily 15-minute routine to reply to comments.

ASSIGNMENT

Practice

Business problem: A café can post three times a week. Suggest pillars and a weekly plan.

Steps

1. Pick two platforms and write your three content pillars.
2. Plan two weeks of posts, one per pillar.
3. Set a daily 15-minute routine to reply to comments.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Pillars: menu and offers, behind the scenes, customer stories. Week: Monday offer, Wednesday behind the scenes, Friday customer story, plus daily replies to comments.

Check yourself

1. **What is a content pillar?**
   A. A type of ad
   B. A recurring theme you post about
   C. A paid tool
   D. A hashtag

   Answer: A recurring theme you post about. Pillars keep your posts focused.

2. **Why disclose paid partnerships?**
   A. It looks nice
   B. Rules and trust require it
   C. It raises price
   D. Nobody checks

   Answer: Rules and trust require it. Platforms and regulators require clear disclosure.

3. **What should you do before boosting a post?**
   A. Delete it
   B. See that it performs organically
   C. Add more hashtags
   D. Change the colour

   Answer: See that it performs organically. A post that already resonates is a safer bet to promote.

Learn more (official sources)

- Meta Blueprint (official site, not checked live)

MODULE 7

Paid search (Google Ads)

Search ads put you in front of people who are already looking, and you pay only when they click.

Why it matters

Search ads put you in front of people who are already looking, and you pay only when they click.

Key ideas

- **The auction.** Each search runs an auction. Your position depends on your bid and the quality of your ad and landing page.
- **Campaign structure.** Account, campaigns (budget and goal), ad groups (one theme each), keywords and ads.
- **Match types.** Exact matches the same meaning as the keyword, phrase matches searches that include its meaning in order, and broad matches a wider range of related searches.
- **Negative keywords.** Words that stop your ad showing for irrelevant searches, which saves budget.
- **Ad copy.** Match the searcher's words, state the benefit and give a clear next step.
- **Bidding and conversions.** Bidding strategies work best after conversion tracking is set up and has enough data. Always check conversions are recorded correctly first.

Steps to follow

1. Write one tightly themed ad group with 10 keywords and 5 negatives.
2. Write three ads and a matching landing page.
3. Set up conversion tracking and test it.

ASSIGNMENT

Practice

Business problem: Budget 10,000. Average CPC 20. Conversion rate 4%. Order value 1,500 at 40% margin. Work out clicks, conversions, CPA, ROAS and profit.

Steps

1. Write one tightly themed ad group with 10 keywords and 5 negatives.
2. Write three ads and a matching landing page.
3. Set up conversion tracking and test it.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Clicks = 10,000/20 = 500. Conversions = 4% of 500 = 20. CPA = 10,000/20 = 500. Revenue = 20 × 1,500 = 30,000. ROAS = 3.0. Break-even ROAS = 100/40 = 2.5, so profit = 30,000 × 40% - 10,000 = 2,000.

Check yourself

1. **What makes an ad group effective?**
   A. Many unrelated keywords
   B. One tight theme
   C. No keywords
   D. Random ads

   Answer: One tight theme. A tight theme lets the ads match the searches.

2. **What do negative keywords do?**
   A. Raise bids
   B. Block irrelevant searches
   C. Add reviews
   D. Change fonts

   Answer: Block irrelevant searches. They stop wasted clicks on irrelevant searches.

3. **If the margin is 40%, what ROAS breaks even?**
   A. 1.0
   B. 2.5
   C. 4.0
   D. 40

   Answer: 2.5. Break-even ROAS = 100 divided by the margin percentage.

- Google Skillshop: Google Ads (official site, not checked live)
- Google Ads Help (official site, not checked live)

MODULE 8

Paid social advertising

Social ads find people by interests and behaviour, even when they were not searching, which suits discovery and retargeting.

Why it matters

Social ads find people by interests and behaviour, even when they were not searching, which suits discovery and retargeting.

Key ideas

- **Objectives.** Choose the objective that matches the goal: awareness, traffic, leads or sales. The platform optimises for the objective you pick.
- **Audiences.** Core audiences (location, age, interests), custom audiences (your own visitors or customers, with consent) and lookalikes (people similar to a source group).
- **Creative testing.** Test one thing at a time: image, headline or offer. Give each version enough budget and time.
- **Tracking.** The platform's pixel and server-side events measure results. Set them up with consent and avoid counting the same event twice.
- **Policies.** Some categories (for example housing, credit and employment) have special rules limiting targeting. Read the current ad policies.
- **LinkedIn for B2B.** Target by job title, industry and company size. Costs per click are usually higher, so test small.

Steps to follow

1. Pick one objective and one audience and write two ad versions.
2. Run a small test for a fixed period and record results.
3. Keep the winner and test a new variation.

ASSIGNMENT

Practice

Business problem: Two ads each spent 2,000. Ad A got 50 leads, ad B got 40. Which has the lower cost per lead, and what is it?

Steps

1. Pick one objective and one audience and write two ad versions.
2. Run a small test for a fixed period and record results.
3. Keep the winner and test a new variation.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

Ad A: 2,000/50 = 40 per lead. Ad B: 2,000/40 = 50 per lead. Ad A wins, but check the leads' quality as well as the cost.

Check yourself

1. **What is a lookalike audience?**
   A. Your exact customers
   B. People similar to a source group
   C. A random group
   D. Competitors

   Answer: People similar to a source group. Lookalikes help reach new people who resemble your best customers.

2. **How should you test creative?**
   A. Change everything at once
   B. Change one element at a time
   C. Never test
   D. Test only colours

   Answer: Change one element at a time. Changing one element shows what caused the difference.

3. **Why read ad policies?**
   A. For fun
   B. Some categories limit targeting and content
   C. They never change
   D. To raise prices

   Answer: Some categories limit targeting and content. Policies restrict some categories and can reject ads.

Learn more (official sources)

- Meta Blueprint (official site, not checked live)

MODULE 9

Email marketing and automation

Email lets you reach people who already said yes, at low cost, and it is one of the most measurable channels.

Why it matters

Email lets you reach people who already said yes, at low cost, and it is one of the most measurable channels.

Key ideas

- **Permission.** Email people who asked to hear from you, tell them what they will receive, and make unsubscribing easy. Check the email and privacy laws that apply to you and to them.
- **Segmentation.** Send different messages to different groups (new subscribers, buyers, inactive people).
- **Automated flows.** A welcome series, an abandoned-cart reminder and a re-engagement message work in the background.
- **Deliverability.** SPF, DKIM and DMARC records prove you are the real sender. Keep lists clean and avoid misleading subject lines.
- **Metrics.** Delivery rate, open rate (less reliable because of privacy features), click rate, conversion rate and unsubscribe rate.
- **Subject lines and content.** Be specific and honest. One clear message and one clear button per email.

Steps to follow

1. Create a welcome series of three emails.
2. Segment your list into two groups and write a different email for each.
3. Check your domain's SPF, DKIM and DMARC.

ASSIGNMENT

Practice

Business problem: A list of 5,000 gets 100 unsubscribes in one send. What is the unsubscribe rate and what do you check?

Steps

1. Create a welcome series of three emails.
2. Segment your list into two groups and write a different email for each.
3. Check your domain's SPF, DKIM and DMARC.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

100/5,000 = 2%. That is high: check whether the right people were mailed, whether the subject line matched the content and how often you send.

Check yourself

1. **What does DMARC do?**
   A. Designs emails
   B. Tells receivers what to do when SPF or DKIM fail
   C. Counts opens
   D. Writes subject lines

   Answer: Tells receivers what to do when SPF or DKIM fail. DMARC sets the policy for failed authentication.

2. **Why segment a list?**
   A. To send more email
   B. To send more relevant messages
   C. To hide unsubscribes
   D. To skip permission

   Answer: To send more relevant messages. Segments let each group get relevant messages.

3. **Which is a good subject line?**
   A. URGENT!!! OPEN NOW
   B. Three invoice mistakes that delay payment
   C. Hi
   D. FREE FREE FREE

   Answer: Three invoice mistakes that delay payment. A specific, honest subject line sets the right expectation.

- Google sender guidelines (official site, not checked live)

MODULE 10

Analytics and tracking

You cannot improve what you cannot measure. Good tracking shows which channels and messages actually produce results.

Why it matters

You cannot improve what you cannot measure. Good tracking shows which channels and messages actually produce results.

Key ideas

- **Web analytics.** Google Analytics 4 records user actions as events. Mark the important events (form submit, purchase) as conversions.
- **UTM parameters.** Tags added to a link (source, medium, campaign, term, content) so reports show which campaign sent each visit. Use lower-case, consistent names.
- **Search Console.** Shows how people find you in search: queries, pages, clicks and indexing issues.
- **Dashboards.** Looker Studio or a simple sheet gathers the few numbers you review weekly.
- **Attribution.** Several touches lead to a sale. Models split credit differently, so look at more than the last click.
- **Privacy.** Ask for consent where the law requires it, collect only what you need and explain it in your privacy policy.

Steps to follow

1. Create UTM links for each campaign link using the tested builder below.
2. Mark one form submission as a conversion and test it.
3. Build a one-page weekly report of five numbers.

ASSIGNMENT

Practice

Business problem: Build a tracking link for the 'Diwali Sale' email's top banner.

Steps

1. Create UTM links for each campaign link using the tested builder below.
2. Mark one form submission as a conversion and test it.
3. Build a one-page weekly report of five numbers.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

https://example.com/offer?utm_source=newsletter&utm_medium=email&utm_campaign=diwali-sale&utm_content=top-banner

Check yourself

1. **What does utm_source name?**
   A. The page title
   B. The place that sent the visit
   C. The user's name
   D. The page colour

   Answer: The place that sent the visit. Source names where the traffic came from, such as newsletter or a platform.

2. **Why keep UTM names consistent?**
   A. Looks tidy only
   B. Reports group them correctly
   C. It is a law
   D. It speeds the page

   Answer: Reports group them correctly. Different spellings split one campaign into several rows.

3. **What should come before any tracking?**
   A. A logo
   B. A clear question you want to answer
   C. A new website
   D. A bigger budget

   Answer: A clear question you want to answer. Decide the question first so you track what matters.

MODULE 11

Conversion optimisation and A/B testing

A small lift in the share of visitors who act can be worth more than a large increase in traffic.

Why it matters

A small lift in the share of visitors who act can be worth more than a large increase in traffic.

Key ideas

- **Conversion rate.** Conversions divided by visits (or clicks). It shows how well a page turns visitors into customers.
- **Hypothesis.** A testable statement: 'Cutting the form to three fields will raise sign-ups because it is quicker to finish.'
- **A/B testing.** Show two versions to similar visitors at the same time and compare. Change one thing.
- **Statistical significance.** A way to judge whether a difference is likely real or just chance. The code below runs a two-proportion test.
- **Sample size and duration.** Run the test long enough to reach enough visitors and to cover weekday and weekend behaviour. Do not stop the moment one version leads.
- **Tools change.** Google Optimize, a free A/B testing tool, was retired in 2023. Check which testing tools are current before you choose one.
- **Common mistakes.** Testing many changes at once, stopping early, ignoring segments and testing pages with too little traffic.

Steps to follow

1. Pick the page with the most visits and the lowest conversion rate.
2. Write a hypothesis and change one element.
3. Run the test to a fixed sample size, then decide.

ASSIGNMENT

Practice

Business problem: Version A: 200 sign-ups from 4,000 visits. Version B: 260 from 4,000. Is B better?

Steps

1. Pick the page with the most visits and the lowest conversion rate.
2. Write a hypothesis and change one element.
3. Run the test to a fixed sample size, then decide.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

A converts 5.0% and B 6.5%. The two-proportion test gives z = 2.88 and p = 0.004, so the difference is very unlikely to be chance. Roll out B and keep testing.

Check yourself

1. **What should an A/B test change?**
   A. Everything
   B. One element
   C. Nothing
   D. The audience each time

   Answer: One element. Changing one element shows what caused the difference.

2. **When should you stop a test?**
   A. As soon as one version leads
   B. After the planned sample size or time
   C. Never
   D. When bored

   Answer: After the planned sample size or time. Stopping early inflates false wins.

3. **What is a conversion rate?**
   A. Clicks divided by cost
   B. Conversions divided by visits
   C. Revenue divided by cost
   D. Views divided by days

   Answer: Conversions divided by visits. It is the share of visitors who take the action.

MODULE 12

Strategy, budget and your career

Strategy ties the channels together: who you reach, what you say, how much you spend and how you know it worked.

Why it matters

Strategy ties the channels together: who you reach, what you say, how much you spend and how you know it worked.

Key ideas

- **A 90-day plan.** Goal, audience, offer, three channels, weekly actions, budget and the numbers you will review.
- **Budget.** Start small, test, then move money to what works. Know your margin so you know the break-even return.
- **CAC and LTV.** Customer acquisition cost is spend divided by new customers. Lifetime value is the margin a customer brings over time. LTV well above CAC means growth is sustainable.
- **Reporting.** One page: goal, what happened, what you learned, what you will do next.
- **Building a portfolio.** Run small real or practice projects, document the problem, action and result, and show your method.
- **Credentials and freelancing.** Free courses and certifications show effort. Check each provider's current offer. See the Master Freelancing books for packages, proposals and pricing.

Steps to follow

1. Write a one-page 90-day plan for one business.
2. Calculate CAC, LTV and the break-even return.
3. Create a portfolio page with one project.

ASSIGNMENT

Practice

Business problem: Spend 20,000 brought 20 customers. Each customer is worth an average order of 1,000, twice a year, for 3 years at a 30% margin. Work out CAC, LTV and LTV to CAC.

Steps

1. Write a one-page 90-day plan for one business.
2. Calculate CAC, LTV and the break-even return.
3. Create a portfolio page with one project.

Expected output: Your written answer, checked against the model.

SOLUTION (ANSWER KEY)

CAC = 20,000/20 = 1,000. LTV = 1,000 × 2 × 3 × 30% = 1,800. LTV to CAC = 1.8, below the common rule of thumb of 3, so improve conversion, price or retention before spending more.

Check yourself

1. **What is CAC?**
   A. Cost to acquire a customer
   B. Click and call
   C. Content and copy
   D. Cash after cost

   Answer: Cost to acquire a customer. CAC is acquisition spend divided by new customers.

2. **What does a low LTV to CAC ratio suggest?**
   A. Growth is easy
   B. Acquisition may cost too much for the value
   C. Nothing
   D. Increase the budget at once

   Answer: Acquisition may cost too much for the value. If a customer is worth little more than they cost to win, fix the economics first.

3. **What belongs in a weekly report?**
   A. Everything ever tracked
   B. Goal, results, learning and next step
   C. Only screenshots
   D. Only likes

   Answer: Goal, results, learning and next step. A short, decision-focused report is read and used.
