C7 Tools and Learning Resources Directory (categories from the prompt)

Item	Answer
How to use this directory	Each entry needs: purpose, beginner explanation, official site, official docs, official tutorial, free or paid status, the course module it supports, learning order and an exercise. Check the official pages before you rely on prices or features; record the date you checked.
Categories	1 Excel and spreadsheets; 2 SQL and databases; 3 Power BI and BI platforms; 4 Python and coding environments; 5 Statistics and mathematics; 6 Machine learning; 7 Data engineering; 8 Cloud platforms; 9 Generative AI; 10 RAG and vector databases; 11 AI agents; 12 MCP and API development; 13 No-code automation; 14 Git and development; 15 Product and project management; 16 Portfolio and interview preparation.
Tool evaluation sheet (for AI and no-code tools)	What it does; why use it; who should use it; main features; free, freemium or paid features and limits; strengths; weaknesses; alternatives; practical example; official documentation; exercise.

C11 AI and No-Code Tools Laboratory: tutorials by category and setup (PDF 10)

Item	Answer
How to use this lab	Each category below names the SkillNavora tutorial that teaches it in full, with steps, templates, a project and a PDF. Do the setup checklist first, then one tutorial per week.
Setup checklist (do once)	A Google account (Sheets, Looker Studio, Colab, NotebookLM); a Microsoft account (Excel, Power BI Desktop on Windows); a GitHub account; a free ChatGPT, Claude or Gemini account; a password manager; a separate email folder for tool sign-ups. Do not use real company or customer data in personal accounts.
Automation (no-code)	Zapier: complete tutorial (zapier-tutorial.html). Make: complete tutorial (make-tutorial.html). n8n: complete tutorial (in the Data Science & AI handbook, Tools track). Start with a form → sheet → email automation.
App and website builders	Lovable: complete tutorial (lovable-tutorial.html). Replit: complete tutorial (replit-tutorial.html). AI Builder Tools course for Claude, ChatGPT and Codex, Gemini and Lovable (ai-builder-tools.html).
Web automation and browser agents	Web Automation: webhooks, triggers and Playwright MCP (web-automation.html). Browser Automation & AI Agents (browser-automation.html).
AI assistants and research	AI Models and Platforms guide (ai-models-guide.html) for Grok, ChatGPT, Claude, Gemini and Lovable. Supplement B, section B13.4 compares Julius AI, NotebookLM and Perplexity for analysis.

Design	Figma: complete tutorial (Data Science & AI handbook, Tools track).
BI and dashboards	Power BI track (8 lessons) and Supplement B, section B12; Tableau track.
Notebooks and code	Python track (Google Colab or Jupyter); Git and GitHub lessons; Supplement B, section B9 for the command line.
Agents and MCP	Agents track; Agent Orchestration & Monitoring (agent-orchestration.html); How AI Agents Work guide (ai-agents-guide.html).
Evaluate any new tool	Use the tool evaluation sheet in section C7: purpose, cost, data privacy, integrations, learning curve, export options and a one-hour trial task.
