DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 9

E-commerce virtual assistant

Profession 9 of 10 in Development and IT.

What the profession means

An e-commerce virtual assistant supports an online store: product listings, order processing, customer messages, stock updates and marketplace admin. The work is repetitive, so checklists and clean data matter most.

What professionals do every day

Uploads products with correct titles, prices and images; checks orders; updates stock; answers customer messages; and tracks returns.

Why businesses hire them, and what problems they solve

Online stores lose sales to wrong prices, out-of-stock items and slow replies. A VA keeps the store accurate every day.

- Wrong prices or stock levels online.
- Orders missed on busy days.
- Listings with missing details.

Skills you need

- Product data entry.
- Order handling.
- Basic image editing.
- Marketplace rules.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Shopify	Online store platform	Trial (check current)	Subscription	www.shopify.com
Google Sheets	Product and stock sheets	Free	Paid plans	sheets.google.com
Google Workspace	Mail, calendar, documents	Free personal account	Paid business plans	workspace.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Create ten product listings from a supplier sheet.
Intermediate	Build a stock sheet with a low-stock alert.

Advanced	Write a returns checklist.

Projects by level

- **Beginner:** Listing support for a fashion store.
- **Intermediate:** Order desk for a food brand.
- **Advanced:** Marketplace listings for a craft seller.

Client-ready portfolio project

A listing and order pack for a fictional store: ten product listings, a stock sheet with a low-stock rule and a returns checklist.

Worked example

Worked example. A product sells at 499 with a 10% discount; the listing shows 449 and the stock sheet flags the item when stock drops below 5 units.

Assignment with full solution

ASSIGNMENT

Stock alert

Business problem: A store's stock sheet must flag items to reorder before they sell out.

Steps

1. Set a reorder level for each product.
2. Add a formula that marks an item 'reorder' when stock is below its level.
3. Test with one item above and one below the level.
4. Share the list each morning.

Expected output: The stock sheet with the rule and the test results.

SOLUTION (ANSWER KEY)

A simple rule removes guesswork. The test confirms that one item shows 'ok' and the other shows 'reorder' before the rule is trusted.

Common mistakes

- Listing items before checking stock.
- Copying prices from another store without checking.
- Replying to customers with guesses.
- Ignoring marketplace policy changes.

Freelancing opportunities

- Listing and order support for online sellers.

- Marketplace admin for craft and fashion stores.
- Briefs for 'e-commerce VA', 'Shopify listing', 'product upload'.
