MODULE C

AI video creation and editing: process, tools and quality

Short video is how most businesses now explain products. This module covers the full production path.

C1. Types of video work

Type	Typical use	Common mistake
Text-to-video and image-to-video	Ad concepts, B-roll, product scenes	Unclear motion, inconsistent characters between clips
AI avatars and presenters	Explainers, training, announcements	Using a real person likeness without written permission
Voiceovers, subtitles, translation and dubbing	Multilingual ads, accessibility	Not checking names and numbers in generated subtitles
Background removal and editing	Product videos, reels, cut-downs	Visible edges and flicker around the subject
Social reels and YouTube production	Regular content for brands	No hook in the first three seconds

C2. Product and advertising videos

A product video answers three questions in order: what it is, why it matters to this viewer, and what to do next. Write the three answers before opening a tool.

C3. Educational videos

One idea per video, a worked example on screen, and a short recap. Add captions to every video.

C4. Production checklist

1. Script and storyboard approved.
2. Prompt and settings logged for each clip.
3. Voice and subtitles checked against the script.
4. Brand colours, logo and fonts licensed for use.
5. Exported in each platform size; file names and captions delivered with the video.

VERIFICATION NOTE

Tool names, features, plan names and prices change often. The links below point to official sites but were not checked live in this session. Confirm each one before you rely on it or quote it to a client.
