PART 2 · MODULE G

Freelance projects with sample data and solutions

Seven client-style projects. The first is worked in full above; the others follow the same steps with the sample database.

#	Project	Uses
1	Sales dashboard (worked above)	SQL, dashboard
2	Customer retention analysis	Cohorts in SQL (see the analytics engineer chapter)
3	Marketing campaign analysis	Channel CAC and ROAS (see the Marketing textbook)
4	Financial performance report	Variance analysis (see the financial analyst chapter)
5	Customer segmentation	Spend segments (worked in the data mining chapter)
6	SQL reporting	Reporting view (worked in the SQL developer chapter)
7	Power BI executive dashboard	Shared measures (see Module D)

Each project needs a brief, sample data, the steps, the expected output, a rubric and a client-ready summary. Use the sample database in this book for practice, and a real or clearly fictional dataset for your portfolio.
