Lesson 1.1: Image-to-video and text-to-video platforms

What you learn

- **Text-to-video vs image-to-video.** Text-to-video builds a clip from a prompt. Image-to-video animates a picture you chose, which gives more control over how the first frame looks.
- **Runway ML.** A full creative suite with video generation, editing tools and camera controls.
- **Kling AI.** A video generator known for strong motion and realism; it uses a credit system.
- **Pika Labs.** Short clips and effects; quick for stylised results.
- **HeyGen.** Talking avatars and translated video with lip-sync; useful for explainers and training.
- **Before you start.** Plans, credits and features change often. Read each tool's current pricing and its rules on commercial use, likeness and consent before selling any work.

Tools and resources (official sites, not checked live)

- Runway
- Kling AI
- Pika
- HeyGen

ASSIGNMENT

Practice for lesson 1.1

Business problem: Compare four tools on one idea.

Steps

1. Pick one 5-second scene.
2. Generate it in two tools, using the same words.
3. Score each for motion, faces, text and cost in credits.
4. Write a one-paragraph recommendation.

Expected output: A comparison table and a recommendation.

SOLUTION (ANSWER KEY)

Use a 1 to 5 score for each item and record the credits used. The best tool depends on the scene, so keep the table for next time.

Check yourself

1. Why start from an image?
   Answer: You control the first frame.
2. What should you check before selling AI video?
   Answer: The tool's commercial-use terms and any likeness or consent limits.
