Lesson 1.2: Prompt engineering for consistent scenes and characters

What you learn

- **The consistency formula.** [Subject description] + [Style and lighting] + [Camera lens specs] + [Seed number or reference image]. Reuse the same subject words in every shot.
- **Reference images.** Most tools let you upload a reference of the character. This is more reliable than text alone.
- **Seeds.** Some tools expose a seed number; reusing it with similar prompts gives similar results. Not every tool supports it.
- **Keep a character sheet.** Write one fixed paragraph describing the character and paste it into every prompt.
- **Aspect ratio.** The flag --ar 16:9 is Midjourney syntax. In Runway, Kling and Pika you set the aspect ratio in the tool's own settings.

ASSIGNMENT

Practice for lesson 1.2

Business problem: Write a character sheet and three shots.

Steps

1. Write a 40-word description of one character.
2. Write three shot prompts that each start with that description.
3. Generate them and compare faces and clothes.

Expected output: Three shots where the character is recognisable.

SOLUTION (ANSWER KEY)

Keep the description word for word. If a detail drifts, add it to the sheet. Use the same reference image in every shot.

Check yourself

1. Why reuse the same words?
   Answer: Small wording changes cause the character to drift.
2. Where do you set aspect ratio outside Midjourney?
   Answer: In the tool's settings.
