Lesson 1.4: Credit optimisation and efficiency

What you learn

- **Two-stage method.** Create the base image in an image tool (Midjourney or Leonardo.ai), approve it, then animate only the approved image in Runway or Kling. Images cost less than video, so you iterate cheaply.
- **Short test clips.** Generate 3 to 5 second tests before a longer clip.
- **Reuse.** Animate several shots from one approved set of images.
- **Track.** Keep a sheet of credits spent per scene.

Tools and resources (official sites, not checked live)

- Leonardo.ai
- Midjourney

ASSIGNMENT

Practice for lesson 1.4

Business problem: Plan a 30-second ad on a credit budget.

Steps

1. Break it into six 5-second shots.
2. Plan images first.
3. Estimate credits using each tool's current price list.
4. Leave 20 percent for re-runs.

Expected output: A shot list with a credit budget.

SOLUTION (ANSWER KEY)

Check each tool's price page for current credit costs, then multiply by the shots and the re-runs.

Check yourself

1. Why iterate on images first?
   Answer: They cost less than video.
2. Why keep a 20 percent reserve?
   Answer: Some generations fail or need a redo.
