Lesson 7.1: AI-first coding workflows with Cursor, Replit Agent and Claude

What you learn

- **Workflow.** Describe the feature, let the assistant plan, build in small steps, run and read the output, then review the diff before accepting.
- **Prompt structure.** Role, task, constraints, files involved and how to test. Short, specific prompts beat long vague ones.
- **Tools.** Cursor edits your local project; Replit Agent builds and hosts in the browser; Claude can write and review code in chat or in an editor.
- **Model names.** Model versions change quickly. Use the best current model the tool offers rather than a named old one.
- **Review.** Read generated code, run tests, and watch for secrets and insecure defaults.

ASSIGNMENT

Practice for lesson 7.1

Business problem: Add a feature in small steps.

Steps

1. Ask for a plan.
2. Implement step 1 and run it.
3. Ask for tests.
4. Review every change.

Expected output: A working feature with tests and a reviewed diff.

SOLUTION (ANSWER KEY)

Small steps make mistakes easy to see and undo.

Check yourself

1. Why work in small steps?
   Answer: Errors are easier to find.
2. What must you always do with generated code?
   Answer: Read, run and test it.
