Lesson 4.3: Storefront API and headless commerce

What you learn

- **Storefront API.** Read products and manage carts from your own front end using GraphQL.
- **Headless.** The front end is separate from Shopify's theme. You gain control and take on hosting and performance work.
- **Hydrogen and Next.js.** Hydrogen is Shopify's React framework for storefronts; Next.js also works with the Storefront API.

Tools and resources (official sites, not checked live)

- Storefront API
- Hydrogen

ASSIGNMENT

Practice for lesson 4.3

Business problem: Fetch products into Next.js.

Steps

1. Create a Storefront access token.
2. Query the first ten products.
3. Render a list.

Expected output: A page that lists live products.

SOLUTION (ANSWER KEY)

Keep the token in an environment variable and call the API from server code where possible.

Check yourself

1. When is headless worth it?
   Answer: When you need custom experiences a theme cannot give.
2. Where should tokens live?
   Answer: In environment variables.
