DEPARTMENT 1 · DEVELOPMENT AND IT · PROFESSION 13

Growth marketer

Profession 13 of 10 in Development and IT.

What the profession means

A growth marketer runs experiments across the whole customer journey, from acquisition to retention, to find repeatable ways to grow revenue.

What professionals do every day

Sets growth targets, runs experiments on channels, onboarding and retention, reads results weekly, and keeps the winners in the playbook.

Why businesses hire them, and what problems they solve

Businesses need compounding growth, not one-off campaigns. A growth marketer finds the levers that repeat.

- Growth that depends on one channel.
- Experiments with no decision rule.
- Retention ignored while acquisition grows.

Skills you need

- Growth models and funnels.
- Experiment design.
- Retention analysis (cohorts).
- Referral and loop design.

Tools (free and paid)

Tool	What it is for	Free option	Paid option	Official link (not checked live)
Google Analytics	Funnels and cohorts	Free	Paid 360 tier	analytics.google.com
Amplitude	Product analytics (verify plans)	Free tier	Paid plans	amplitude.com
Mixpanel	Event analytics (verify plans)	Free tier	Paid plans	mixpanel.com
Google Sheets	Experiment log	Free	Paid plans	sheets.google.com

Learning sequence: beginner, intermediate, advanced

Level	What you can do when you finish
Beginner	Build a cohort retention table for a sample dataset.
Intermediate	Run one onboarding experiment with a decision rule.
Advanced	Write a growth playbook page.

Projects by level

- **Beginner:** Growth plan for an app.
- **Intermediate:** Referral programme for a course.
- **Advanced:** Retention plan for a subscription box.

Client-ready portfolio project

A growth experiment plan for a fictional subscription service: funnel, three experiments with rules, a cohort retention table and a playbook entry.

Worked example

Worked example. A referral reward is tested for four weeks; referred users retain at 40% after 30 days against 30% for others. The reward is kept and added to the playbook with the numbers.

Assignment with full solution

ASSIGNMENT

Cohort retention and experiment decision

Business problem: A subscription service wants to know if a new onboarding step improves retention.

Steps

1. Build a cohort table: users by sign-up week and retention at week 4.
2. Run the new onboarding for one cohort group and the old for another.
3. Compare week-4 retention with a rule: keep the change if it improves by 5 points or more.
4. Write the decision.

Expected output: The cohort table, the rule and the decision.

SOLUTION (ANSWER KEY)

Cohorts show retention over time, which averages hide. The decision rule is fixed before the test. A small improvement may not justify the change; the rule makes that explicit.

Common mistakes

- Experiments without a control group.
- Measuring vanity metrics.
- Ignoring retention.
- Scaling one winner until it stops working.

Freelancing opportunities

- Growth audits and experiment programmes.
- Retention analysis for subscription and app businesses.

- Briefs for 'growth marketing', 'cohort analysis', 'referral programme'.
